### I. INTRODUCTION

#### A. RISK FACTORS

##### Standard Risk Factors

- (i) Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
- (ii) As the price/ value/ interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down. The various factors which impact the value of the

## SCHEME INFORMATION DOCUMENT

- scheme's investments include, but are not limited to, fluctuations in the stock markets, bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the companies and issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
- (iii) Past performance of the Sponsor/ AMC/ Mutual Fund does not guarantee future performance of the scheme.
  - (iv) Baroda BNP Paribas Banking and Financial Services Fund is the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
  - (v) The sponsor / associates are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 10,00,000/- (Rupees Ten lakhs only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
  - (vi) The present scheme is not a guaranteed or assured return scheme.

### Scheme Specific Risk Factors

#### - Market Risk:

All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

#### - Concentration Risk

The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme.

#### Risks associated with investing in equity and equity related instruments:

Investments in equity and equity related instruments are volatile and prone to price fluctuations on a daily basis. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time. Investments in equity and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

#### Risk specific to investing in the Banking and Financial Services Sector

As the Scheme will invest in the equity and equity related securities of companies in the Banking & Financial Services sector, it may be affected by the risks associated with such companies, such as interest rate, credit, market and operational risks.

The Banking & Financial Services sector is subject to extensive Government regulation, which may change frequently. Performance of this sector depends on availability and cost of money and may fluctuate in response to change in interest rates and general economic conditions. Also, as businesses in this sector

## SCHEME INFORMATION DOCUMENT

operate on substantial financial leverage, the value of investments in this sector may be impacted more than the value of investments outside the sector.

### Risk Factors associated with Investments in Derivatives

The Scheme(s) may use various derivative instruments and techniques, permitted within SEBI (Mutual Funds) Regulations, 1996 from time to time including but not limited to portfolio balancing and hedging purpose, which may increase the volatility of Scheme's performance. Usage of derivatives will expose the Scheme(s) to certain risks inherent to such derivatives.

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is a possibility that a loss may be sustained by the Scheme(s) as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance.

In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence the derivative cannot be expected to perfectly hedge the risk of the underlying assets. This also increases the volatility of the Scheme's performance. Some of the risks inherent to derivatives investments include:

1. **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
2. **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
3. **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
4. **Limitations on upside:** Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
5. **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

### Risks associated with Securities Lending

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in a possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible

## SCHEME INFORMATION DOCUMENT

loss of corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

### Risk factors specific to investments in foreign securities:

The Scheme may invest in Foreign Securities including overseas debt / equities / ADRs / GDRs with the approval of RBI/SEBI, subject to such guidelines as may be issued by RBI/SEBI. The net assets, distributions and income of the Scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. The Scheme's NAV may also be affected by a fluctuation in the general and specific level of interest rates internationally, or the change in the credit profiles of the issuers. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the scheme investments.

The Scheme may, where necessary, appoint advisor(s) for providing advisory services for such investments. The appointment of such advisor(s) shall be in accordance with the applicable requirements of SEBI. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, transaction costs and overseas regulatory costs, the fees of appointed advisor(s). The fees related to these services would be borne by the AMC and would not be charged to the Scheme.

### Risk factors associated with investments in REITs and InvITs

- (a) **Price Risk / Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. The valuation of the REIT/InvIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT/InvIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. REITs & InvITs may have volatile cash flows. As an indirect shareholder of portfolio assets, unit holders rights are subordinated to the rights of creditors, debt holders and other parties specified under Indian law in the event of insolvency or liquidation of any of the portfolio assets.
- (b) **Liquidity Risk:** As the liquidity of the investments made by the scheme(s) could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. Further, there is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.
- (c) **Risk of lower than expected distributions:** The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things:
  - success and economic viability of tenants and off-takers
  - economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
  - force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
  - debt service requirements and other liabilities of the portfolio assets
  - fluctuations in the working capital needs of the portfolio assets
  - ability of portfolio assets to borrow funds and access capital markets
  - changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
  - amount and timing of capital expenditures on portfolio assets

## SCHEME INFORMATION DOCUMENT

- insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents.
- (d) **Interest Rate Risk** - Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.
- (e) **Reinvestment Risk**: Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- (f) **Credit Risk**: In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. REITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.
- (g) **Regulatory/Legal Risk**: REITs and InvITs being new asset classes, rights of unit holders such as right to information etc may differ from existing capital market asset classes under Indian Law.

The above are some of the common risks associated with investments in REITs & InvITs. There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.

### Risks for writing covered call options for equity shares:

1. Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. Being a covered call, the downside risk is not unlimited, but limited to the extent of change in the price of underlying security held by the Fund.
2. The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.
3. The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.
4. The total gross exposure related to option premium paid and received shall not exceed the regulatory limits of the net assets of the scheme.

### Risks associated with segregated portfolio:

- Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- Security comprises of segregated portfolio may not realise any value.

## SCHEME INFORMATION DOCUMENT

### Risks associated with investing in securitised debt:

The scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitized debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

**Pass through Certificate (PTC)** (Pay through or other Participation Certificates) represents beneficial interest in an underlying pool of cash flows. These cash flows represent dues against single or multiple loans originated by the sellers of these loans. These loans are given by banks or financial institutions to corporates. PTCs may be backed, but not exclusively, by receivables of personal loans, car loans, two wheeler loans and other assets subject to applicable regulations.

### How the risk profile of securitized debt fits into the risk appetite of the scheme

Securitized debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income like characteristics. The risk of investing in securitized debt is similar to investing in debt securities. In addition, securitized debt may also carry prepayment risk and has a relatively higher liquidity risk (the same are explained in the sections that follow). However, if the fund manager evaluates that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation table. The investment shall be in securitized instruments that are top rated (AAA/ A1+) or its equivalent, by a recognised credit rating agency for the retail pool, and for single loan securitization, limits will be assigned as per the internal credit policy of the Fund.

### Policy relating to originators

The originator is the person who has initially given the loan. The originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). An analysis of the originator is especially important in case of retail loans as this affects the credit quality and servicing of the PTC. Originators may be: Banks, Non Banking Finance Companies, Housing Finance Companies, etc. The fund manager's evaluation will be based on the track record of the originator, delinquencies in the pool and the seasoning of the pool. Other factors that will be considered are loan type, size of the loan, average original maturity of the pool, Loan to Value Ratio, geographical distribution, liquid facility, default rate distribution, credit enhancement facility and structure of the pool.

### Risk associated with each kind of originator:

- (a) **Prepayment risk:** MBS and ABS are subject to prepayment risk. When the underlying loans are paid off by the borrower prior to their respective due dates, this is known as a prepayment. It could be triggered on account of various factors particularly in periods of declining interest rates. The possibility of such prepayment may require the scheme to reinvest the proceeds of such investments in securities offering lower yields, thereby reducing the scheme's interest income.
- (b) **Interest rate risk:** MBS carry interest rate risk. Home loan borrowers are provided the facility of refinancing their loans at the prevailing interest rates. A lowering of interest rates could induce a borrower to pay his loan off earlier than the scheduled tenure, whereas if the interest rates move upward, the borrower would tend to hold on to his loan for a longer period, thus increasing the maturity of the bond. The maturity of the bond could therefore shorten or lengthen, depending on the prevailing interest rates.
- (c) **Credit risk / default risk:** MBS and ABS also carry credit or default risk. MBS and structures carry built-in credit enhancement in different forms. However, any delinquencies would result in reduction of the principal amount if the amount available in the credit enhancement facility is not enough to cover the shortfall. Historically, housing loans have had lower default rates than other forms of credit.

## SCHEME INFORMATION DOCUMENT

- (d) Price risk / liquidity risk: MBS and ABS are subject to prepayment risk. Limited volumes of trading in securitized paper in secondary market could restrict or affect the ability of the scheme to re-sell them. Thus these trades may take place at a discount, depending on the prevailing interest rates.

In case of securitization involving single loans or a small pool of loans, the credit risk of the underlying borrower is analyzed. In case of diversified pools of loans, the overall characteristic of the loans is analyzed to assess the credit risk. Securitization transactions may include some risk mitigants (to reduce credit risk). These may include interest subvention (difference in interest rates on the underlying loans and the PTC serving as margin against defaults), overcollateralization (issue of PTCs of lesser value than the underlying loans, thus even if some loans default, the PTC continues to remain protected), presence of an equity / subordinate tranche (issue of PTCs of differing seniority when it comes to repayment - the senior tranches get paid before the junior tranche) and / or guarantees.

### Level of diversification with respect to the underlying assets and risk mitigation measures for less diversified investments:

Currently, the following parameters are used while evaluating investment decision relating to a pool securitization transaction. These parameters may be revised from time to time.

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	Car	Two wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average maturity (in Months)	Up to 10 Yrs	Up to 3 yrs	Up to 3 yrs	Up to 3 yrs	NA	NA	Refer to Note a	Refer to Note b
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	>10%	>10%	>10%	>10%	NA	NA		
Average Loan to Value Ratio	<90%	<80%	<80%	<80%	NA	NA		
Average seasoning of the Pool	>3 mths	>3 mths	>3 mths	>3 mths	NA	NA		
Maximum single exposure range	<1%	<1%	<1%	<1%	NA	NA		
Average single exposure range %	<1%	<1%	<1%	<1%	NA	NA		

#### Notes

- In case of securitization involving single loans or a small pool of loans, the credit risk of the borrower is analyzed. The investment limits applicable to the underlying borrower are applied to the single loan sell-down.
- Other investments will be decided on a case-to-case basis.

### Minimum retention period of the debt by originator prior to securitization

Issuance of securitized debt is governed by the Reserve Bank of India. RBI norms cover the "true sale" criteria including credit enhancement and liquidity enhancements. In addition, RBI has proposed minimum holding period of between nine and twelve months for assets before they can be securitized. The minimum holding period depends on the tenure of the securitization transaction. The Scheme will invest in securitized debt that is in compliance with the regulations.

### Minimum retention percentage by originator of debts to be securitized

RBI norms cover the "true sale" criteria including credit enhancement and liquidity enhancements, including maximum exposure by the originator in the PTCs. In addition, RBI has proposed minimum retention requirement of between five and ten percent of the book value of the loans by the originator. The minimum retention requirement depends on the tenure and structure of the securitization transaction. The Scheme will invest in securitized debt that is in compliance with the regulations.

## SCHEME INFORMATION DOCUMENT

### **Mechanism to tackle conflict of interest when the mutual fund invests in securitised debt of an originator and the originator in turn invests makes investments in that particular scheme of the fund**

The key risk in securitized debt relates to the underlying borrowers and not the originator. In a securitization transaction, the originator is the seller of the debt(s) and the scheme is the buyer. However, the originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). As the originators may also invest in the scheme, the fund manager shall ensure that the investment decision is based on parameters as set by the Investment Committee (IC) of the AMC and IC shall review the same at regular interval.

### **The resources and mechanism of individual risk assessment with the AMC for monitoring investments in securitised debt**

The fund management team including the credit analyst has the experience to analyze securitized debt. In addition, credit research agencies provide analysis of individual instruments and pools. On an on-going basis (typically monthly) the servicer provides reports regarding the performance of the pool. These reports would form the base for ongoing evaluation where applicable. In addition, rating reports indicating rating changes would be monitored for changes in rating agency opinion of the credit risk.

#### **- Other Risks:**

- (a) Risk associated with inflation: Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
- (b) Legal risk: The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.
- (c) Taxation risk: The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such, no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this Scheme Information Document (SID) is as available under the prevailing taxation laws. This could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the scheme will endure indefinitely.
- (d) Operational Risk: Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the Scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme.
- (e) Valuation risk: This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.
- (f) Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism: The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be

## SCHEME INFORMATION DOCUMENT

negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

### B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the scheme. However, if such limit is breached during the NFO of the scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the scheme complies with these two conditions. In case the scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the Regulations would become applicable automatically without any reference from SEBI and accordingly the scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the scheme on the applicable Net Asset Value on the 15th day of the notice period. The scheme shall adhere to the requirements prescribed by SEBI from time to time in this regard.

### C. SPECIAL CONSIDERATIONS

1. From time to time, the sponsor, their affiliates, associates, subsidiaries, the Mutual Fund and the AMC may invest directly or indirectly in the Scheme. These entities may acquire a substantial portion of the Scheme's units and collectively constitute a major investor in the Scheme. Accordingly, redemption / repurchase of Units held by such entities may have an adverse impact on the Scheme because the timing of such redemption / repurchase may impact the ability of other Unit holders to redeem their Units.
2. Redemption by the Unitholder due to change in the fundamental attributes of the Scheme or due to any other reasons or winding-up of the Scheme for reasons mentioned in this Document may entail tax consequences. The Trustee, AMC, Mutual Fund, their directors, officers or their employees shall not be liable for any such tax consequences that may arise.
3. Investment decisions made by the AMC may not always be profitable.
4. The tax benefits described in this Scheme Information Document are as available under the prevailing taxation laws. Investors are advised to consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming units, before making a decision to invest / redeem units.
6. As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for Redemption of Units may be significant in the event of an inordinately large number of Redemption requests or of a restructuring of the Scheme(s). In view of the above, the Trustee has the right, in its sole discretion, to limit Redemptions (including suspending Redemptions) under certain circumstances, as described under the section pertaining to 'Restriction of Repurchase/Redemption under the Scheme'.
7. Neither this SID nor the Units have been registered in any jurisdiction. The distribution of this SID in certain jurisdictions may be restricted or totally prohibited to registration requirements and accordingly, persons who come into possession of this SID are required to inform themselves about and to observe any such restrictions.

### ABOUT FATCA and CRS DISCLOSURE - Foreign Account Tax Compliance Act

India and US have signed an agreement on July 9, 2015 on the terms of an Inter-Governmental Agreement ("IGA") to implement Foreign Accounts Tax Compliance Act ("FATCA"). Further, the Organization of Economic Development ("OECD") along with G-20 countries has released a 'Standard for Automatic Exchange of Financial Account Information in Tax Matters' commonly known as Common Reporting Standard ("CRS"). India is amongst the first signatories to the Multilateral Competent Authority Agreement ("MCAA") for the purposes of CRS.

The AMC/Mutual Fund is classified as "Foreign Financial Institution" under the FATCA provisions. The intention of FATCA is that the details of U.S. investors holding assets outside the U.S. will be reported by financial institutions to the United States Internal Revenue Service (IRS), as a safeguard against U.S. tax evasion. As a result of FATCA, and to discourage non-U.S. financial institutions from staying outside this regime, financial institutions that do not enter and comply with the regime will be subject to a 30% withholding tax with respect to certain U.S. source income. Under the FATCA regime, this withholding tax applies to payments that constitute interest, dividends and other types of income from the US sources.

The AMC/Mutual Fund would be required to collect relevant information(s) from the investors towards FATCA / CRS compliance and report information on the holdings or investment to the relevant authorities as per the stipulated timelines. The information disclosed may include (but is not limited to) the identity of investors and their direct or indirect beneficiaries, beneficial owners and controlling persons

The FATCA requirements are effective from July 1, 2014. Investors can get more details on FATCA requirements at <http://www.irs.gov/Business/Corporations/Foreign-Account-Tax-Compliance-Act-FATCA>

### Investment in Derivatives

Derivatives: A derivative is an instrument whose value is derived from the value of one or more of the underlying assets which can be securities, commodities, precious metals, bonds, currency, etc. Common examples of derivative instruments are Futures, Options, Interest Rate Swaps, Forward Rate Agreements etc. Subject to the Regulations, as amended from time to time, the Scheme may use techniques and instruments such as trading in derivative instruments, to hedge the risk of fluctuations in the value of the investment portfolio. The Scheme shall enter into derivative transactions in order to seek to generate better returns for the Scheme, and in accordance with the guidelines issued in this behalf by SEBI from time to time. Exposure to derivative instruments will be restricted to 50% of the assets of the Scheme, subject to the regulatory limits mentioned subsequently.

### **Equity Derivatives:**

The Scheme shall transact in exchange traded equity derivatives only and these may take the form of Index Futures, Index Options, Futures and Options on individual equities/securities and such other derivative instruments as may be appropriate and permitted under the Regulations and guidelines from time to time.

Some of these derivative instruments are explained below for the purpose of understanding how they work.

#### **(a) Futures**

A futures contract is a standardized contract made and traded on an exchange between two parties, such that one party commits to sell, and the other to buy, a stipulated quantity of a security, index, commodity etc., at an agreed price on a specific future date.

## SCHEME INFORMATION DOCUMENT

In India, currently three types of futures contracts are available for trading, with 1 month, 2 months and 3 months expiration respectively. A new contract is introduced on the next trading day following the expiry of a futures contract. Futures contracts typically expire on the last Thursday of the month. For example, a contract with June 2018 expiration will expire on June 28, 2018, which is the last Thursday of that month.

### (i) Stock Futures

In a stock futures contract, the underlying instrument, which the parties to the contract agree to buy and sell respectively, at an agreed price on a specific future date, is equity stocks. Single stock futures traded on the National Stock Exchange (NSE) are cash settled and there is no delivery of the underlying stocks on the expiration date.

Example: The Scheme holds shares of ABC Ltd. (ABC), the current market price of which is Rs. 1000/- per share. The Scheme sells one month futures on the shares of ABC at the rate of Rs. 1050/-. If, at the end of the month, the price of the stock falls, to say, Rs. 950/- per share, and correspondingly, the price of the futures falls to Rs. 970/-, the Scheme suffers a loss of Rs. 50/- (Rs. 1000 – Rs. 950) on the stock position held, but this is offset by a profit of Rs. 80 (Rs. 1050 – Rs. 970) that the Scheme makes on the futures position.

### (ii) Index Futures

An Index future gives exposure to equity market indices. Bombay Stock Exchange (BSE) and the National Stock Exchange of India Limited (NSE) trade in index futures of 1, 2 and 3 months maturities. The pricing of an index future is a function of the underlying index and short term interest rates. Index futures are cash settled and there is no delivery of the underlying indices.

Example: The Scheme buys 1000 1-month Nifty futures contracts, each contract value being 100 times the futures index price and the specifics of the contract are as under:

Purchase Date:	June 11, 2018
Spot Index:	4100.00
Future Price:	4110.00
Date of Expiry:	June 28, 2018
Margin:	10%

In this example, the Investment Manager will be required to provide a total margin of approx. Rs. 41,100,000 (i.e.  $10\% \times 4110 \times 1000 \times 100$ ) through eligible securities and cash. If, on the date of expiry, i.e. June 28, 2018 Nifty closes at Rs. 4120/-, the net impact on the Scheme will be a profit of Rs. 10,00,000, i.e. Rs. 4120/- (Closing Spot Price) – Rs. 4110/- (Futures Price) \* 1000 (No. of Contracts) \* 100

Please note that both the above examples use hypothetical numbers and are given for purposes of illustration only. Certain assumptions have been made for simplicity.

### (b) Options

An option is the right, but not the obligation, to buy or sell a specific amount of a stock/commodity/currency/index, at a specified price during a specified period of time. It is essentially a contract between two parties, where the buyer of the option receives a privilege for which he pays a fee (premium) and the seller of the option accepts an obligation for which he receives the premium. Premium is, therefore, the price negotiated and set when the option is bought or sold. A person who buys an option is "long" in the option and a person who sells or "writes" an option, is "short" in the option.

An option contract may be of two kinds:

- (a) **Call option** – This option gives the buyer of the option the right to buy the underlying asset and he can call upon the seller of the option to sell him the underlying asset at the agreed price. Upon such call (exercise of the option), the seller of the option has to necessarily fulfill the obligation.
- (b) **Put option** – This option gives the buyer of the option the right to sell the underlying asset to the seller of the option at the agreed price.

## SCHEME INFORMATION DOCUMENT

Option contracts may be of European Style, where the holder of the option can exercise his right on the date of expiration only, or of American Style, where the holder can exercise his right anytime between the purchase date and the expiration date.

### (i) Stock Options

In India, options contracts on stocks are American style and cash settled. Given below is an example of stock options, using hypothetical figures, and meant for illustration purposes only. Certain assumptions have been made for simplicity.

Example: The Scheme purchases, say, on June 04, 2018, fifty 1-month put option contracts of Rs. 100 shares each of ABC Ltd. (ABC). The expiry date is June 28, 2018, the Strike Price (agreed price for selling the underlying stock) is Rs. 5,000/- and the premium is Rs. 200/-.

These options can be exercised on or before the expiry date, i.e. June 28, 2018. So, if the share price of ABC falls to, say, Rs. 4,500/- on June 27, 2018, and the Investment Manager decides to exercise the option, the net impact for the Scheme will be as under:

The profits for the Scheme on account of the fall in share price are Rs. 25,00,000/-  $\{(5,000 - 4,500) * 50 * 100\}$ . However, as the premium paid by the Scheme for the options contract is Rs. 10,00,000/- (Rs. 200 \* 50 \* 100), the net profit for the Scheme, will be less of the premium paid, and therefore, amounts to Rs. 15,00,000/- (Rs. 25,00,000 - Rs. 10,00,000).

### (ii) Index Options

An options contract, where the underlying asset is an index, is known as an index options contract. Index option contracts are generally European Style options. Given below is an example of index options, using hypothetical figures, and meant for illustration purposes only. Certain assumptions have been made for simplicity.

Example: The spot Nifty as on June 07, 2018 is 1,000, and the Scheme buys 5000 Nifty put options at a strike price of 1,000/- on paying a premium of Rs 10 per option (aggregate Rs 50,000/-). Now, if the market falls resulting in a drop in the spot Nifty to 900 on the contract expiry date, i.e. June 28, 2018, and the Scheme exercises its right to sell the Nifty options, the impact for the Scheme will be as under:

Gross profit for the Scheme is Rs. 500,000/- (5000 Nifty x 100) and net profit after accounting for the premium paid is Rs. 450,000/- (Rs. 500,000-Rs. 50,000).

However, if the Nifty, instead of falling, goes up to 1,100 on June 28, 2018, the Scheme will not exercise the option, and the loss from the options contract will be restricted to the premium of Rs. 50,000/-, while the increase in index value will result in the portfolio of the Scheme showing commensurate gains.

- b. This position limit shall be applicable on the combined position in all derivative contracts on a underlying stock at a Stock Exchange.
- c. For index based contracts, the Mutual Fund shall disclose the total open interest held by its Scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

Further according to SEBI Circular, Cir/ IMD/ DF/ 11/ 2010 dated August 18, 2010, the following additional exposure limits and restrictions shall apply for investment by the Scheme in derivatives:

1. The cumulative gross exposure through equity, debt and derivative positions shall not exceed 100% of the net assets of the Scheme.
2. The Scheme shall not write options or purchase instruments with embedded written options.
3. The total exposure related to option premium paid shall not exceed 20% of the net assets of the Scheme.
4. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
5. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:

## SCHEME INFORMATION DOCUMENT

- a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
  - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 1.
  - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
  - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
6. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 1.
7. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

As and when SEBI notifies amended limits in position limits for exchange traded derivative contracts in future, the aforesaid position limits, to the extent relevant, shall be substituted with the SEBI amended limits.

## STRATEGIES INVOLVING DERIVATIVES

The Mutual Fund may use the following strategies while trading in derivatives for the purpose of efficient portfolio management:

### (a) Reverse Arbitrage:

This strategy will be adopted if the cash price of a stock is reasonably greater than single stock futures of the said stock, then the Investment Manager may sell cash position in the stock and buy single stock futures of the said stock. In this case the Investment Manager will still be having a long-term view on the stock but is able to minimize the cost of holding of the stock.

#### Risk Factors:

- a. Model Risk, the risk of mis-pricing or improper valuation of derivatives.
- b. Trade Execution Risk, where the final execution price is different from the screen price leading to dilution in the spreads and hence impacting the profitability of the reverse arbitrage strategy.

### (b) Arbitrage:

This strategy will be adopted if the single stock future of XYZ is reasonably greater than the cash price of XYZ, then the Investment Manager will buy the shares of XYZ in the cash market and sell equivalent numbers of single stock futures of XYZ. In this case the Investment Manager may not have an investment view of the stock XYZ but would like to enhance the portfolio value.

#### Risk Factors:

- a. Basis Risk, which arises when the instrument used as a hedge does not match the movement in the instrument/underlying asset being hedged.
- b. Trade Execution Risk, where the final execution price is different from the screen price leading to dilution in the spreads and hence impacting the profitability of the reverse arbitrage strategy.

## SCHEME INFORMATION DOCUMENT

### c. Portfolio Hedging:

This strategy will be adopted:

- i. If in an already invested portfolio of a Scheme, the Investment Manager is expecting a market correction, the Investment Manager may sell Index Futures to insulate the portfolio from the market related risks.
- ii. If there are significant inflows to the Scheme and the market expectations are bullish, the Investment Manager may buy Index Futures to continue participation in the equity markets.

This strategy is used to reduce the time to achieve the desired invested levels.

### Risk Factors:

- a. Model Risk, the risk of mis-pricing or improper valuation of derivatives.
- b. Basis Risk, which arises when the instrument used as a hedge does not match the movement in the instrument/underlying asset being hedged.
- c. Trade Execution Risk, where the final execution price is different from the screen price leading to dilution in the spreads and hence impacting the profitability of the reverse arbitrage strategy.

### Writing Options

#### Benefits of writing an option with underlying stock holding (Covered call writing strategy)

The covered call strategy can be followed by the Fund Manager in order to hedge risk thereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits:

- a) Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- b) Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

#### Illustration

Illustration - Covered Call strategy using stock call options:

Suppose a fund manager buys equity stock of XYZ Ltd. For Rs. 1000 and simultaneously sells a call option on the same stock at a strike price of Rs. 1100. The scheme earns a premium of say, Rs. 50. Here, the fund manager does not think that the stock price will exceed Rs. 1100.

Scenario 1: Stock price exceeds Rs. 1100

The call option will get exercised and the fund manager will sell the stock to settle his obligation on the call at Rs.1100 (earning Rs. 100, a return of 10% on the stock purchase price). Also, the scheme has earned a premium of Rs. 50

Net Gain - Rs. 150 (100+50)

Scenario 2: Stock prices stays below Rs. 1100

The call option will not get exercised and will expire worthless. The premium earned on call option will generate alpha for the scheme.

Net Gain - Rs. 50

**Writing of call option (under the covered call strategy) can be undertaken subject to the following conditions:**

1. The Scheme may write call options only under a covered call strategy for constituent stocks of NIFTY 50 and BSE SENSEX.
2. The total notional value (taking into account strike price as well as premium value) of call options written by the Scheme shall not exceed 15% of the total market value of equity shares held in the Scheme. In case of any passive breaches, the Scheme shall have 7 trading days to rebalance the portfolio. During the rebalancing period, no additional call options can be written in the Scheme.
3. The total number of shares underlying the call options written shall not exceed 30% of the unencumbered shares of a particular company held in the Scheme. The unencumbered shares in a scheme shall mean shares that are not part of Securities Lending and Borrowing Mechanism (SLBM), margin or any other kind of encumbrances.
4. In no case, the Scheme shall write a call option without holding the underlying equity shares. A call option can be written only on shares which are not hedged using other derivative contracts.
5. The premium received shall be within the requirements prescribed in terms of SEBI circular dated August 18, 2010 i.e. the total gross exposure related to option premium paid and received must not exceed 20% of the net assets of the Scheme.

## SCHEME INFORMATION DOCUMENT

6. The call option written shall be marked to market daily and the respective gains or losses factored into the daily NAV of the respective scheme(s) until the position is closed or expired.

### Investment in other schemes

The Scheme may, in line with its investment objectives, invest in another scheme under the management of AMC or of any other asset management company. The aggregate inter-scheme investment by the Mutual Fund under all its schemes, and schemes of other mutual funds, other than fund of fund schemes, shall not be more than 5% of the net assets of the Mutual Fund. No fee shall be charged by the AMC on investment in any scheme under the management of AMC or of any other asset management company.

### E. WHAT ARE THE INVESTMENT STRATEGIES?

The key factors of the investment strategy of the Scheme will be:

1. Identifying attractive opportunities on the basis of growth prospects and valuations of the businesses over a medium term.
2. Emphasis on stock selection – The stock selection will take into consideration the following:
  - a. Fundamentals of the business
  - b. Market Capitalisation
  - c. Industry structure
  - d. Quality of management
  - e. Sensitivity to economic factors
  - f. Financial strength of the company and the key earnings drivers.
3. The Scheme will invest in a number of companies without any restriction of market capitalization within the Banking and Financial Services Sector.
4. Within the Banking & Financial Services Sector, the Scheme will look at a bottom-up stock selection, and bottom-up fundamental research into stocks will be conducted, including company meetings, with a view to assessing management quality, competitive positioning and growth potential.

### Banking and Financial Services Sector

A financial system, which is inherently strong, functionally diverse and displays efficiency and flexibility, is critical to our national objectives of creating a market-driven, productive and competitive economy. A mature system supports higher levels of investment and promotes growth in the economy with its depth and coverage. The financial system in India comprises financial institutions, financial markets, financial instruments and services. These entities working in tandem are the engines of growth as India progresses towards becoming a developed nation both in terms of social and physical infrastructure.

The financial services in India like in most parts of the world comprise three critical components – basic banking, corporate finance and investment linked services. The companies that operate in this space are referred to as Banking & Financial Services Industry (BFSI).

BFSI has played a critical role in fast-tracking India growth. These companies have offered significant investment opportunities for the retail investors to benefit from. There has been considerable broadening and deepening of Indian financial markets due to the reforms undertaken by the respective regulators as well. Entry of global financial heavyweights has further strengthened BFSI in India. Strong regulatory environment and self-regulation on the part of the companies have enabled them to tide over the financial crisis that engulfed the world in 2008. As the need for capital and investment related services in India increases, these companies are expected to see significant growth in their balance sheet. With high quality talent, lower operating expenses and tech-based innovation; this sector has the right ingredients to make India a front-runner in the global financial services space. Most companies in this segment are already household names in India and have very high visibility in the capital market space. In spite of being a sector specific fund, there are enough stocks available in the market for the fund manager to create a growth-oriented portfolio. Indian entrepreneurs looking to make a mark in this space are expected to tap the market through IPOs in the near future as well. In short, BFSI in India is an attractive package as it

offers investors a strong investment idea because of its sheer potential and innovative approach towards building long-term value

### Risk control measures

Investments made by the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. While allocating and choosing securities, the Investment Manager will aim to diversify by gaining broad exposure to different industries and companies in order to reduce risk.

### Risk Mitigation measures for investments in equity / equity related instruments

- The Scheme aims to maintain a well-diversified equity portfolio comprising stocks across various sectors of the economy. This shall aid in managing concentration risk and sector specific risks.
- The Scheme targets to maintain exposure across different market cap segments - i.e. large, mid-cap and small cap. This shall aid in managing volatility and also improve liquidity.
- The Scheme's will strive to mitigate risk through a judicious mix of Debt and Money Market Instruments and equity/ equity related instruments.

The scheme may utilize derivative instruments for hedging & portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre-approved International Swaps and Derivatives Association (ISDA) agreements. The scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI/RBI for the purpose of hedging and portfolio rebalancing.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in Scheme.

### Portfolio turnover

The Scheme is an open-ended scheme and as such, there would a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. Nonetheless, the AMC will take advantage of opportunities that present themselves from time to time in the securities market.

### Position of debt & money market in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The G-Sec market is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Sec market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured

## SCHEME INFORMATION DOCUMENT

promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri-party repo on Government Securities or treasury bills (TREPS).
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as money market instruments, PSU / DFI / corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option. The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

Instruments	Current yield as on 6th April 2023 (% per annum)
TREPS	6.35-6.45
3M T-Bill	6.75-6.80
1 Y T-Bill	7.00-7.10
10 Y G Sec	7.20-7.25
3M PSU Bank CD	7.00-7.10
3M NBFC CP	7.15-7.25
1 Y PSU Bank CD	7.45-7.55
1 Y NBFC CP	7.75-7.85
1Y Manufacturing Company CP	7.55-7.65
5 Y AAA Institutional Bond	7.50-7.60
10 Y AAA Institutional Bond	7.55-7.60

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

### Overseas Debt Market

The nature and number of debt instruments available in international debt markets is very wide. In terms of diverse instruments as well as liquidity, overseas debt markets offer great depth and are extremely well developed.

Investment in international debt greatly expands the universe of top quality debt, which is no longer restricted to the limited papers available in the domestic debt market. The higher rated overseas sovereign, quasigovernment and corporate debt offer lower default risk in addition to offering a high degree of liquidity since these are traded across major international markets.

Investments in rated international debt offer multiple benefits of risk reduction, a much wider universe of top quality debt and also potential gains from currency movements. Investments in international markets are most often in U.S. dollars, though the Euro, Pound Sterling and the Yen are also major currencies.

## SCHEME INFORMATION DOCUMENT

Though this market is geographically well-spread across global financial centres, the markets in the U.S., European Union and London offer the most liquidity and depth of instruments.

Besides factors specific to the country / issuer, international bond prices are influenced to a large extent by a number of other factors; chief among these are the international economic outlook, changes in interest rates in major economies, trading volumes in overseas markets, cross currency movements among major currencies, rating changes of countries / corporations and major political changes globally.

The overseas securities markets offer new investment and portfolio diversification opportunities by enabling investments in the overseas markets. However, such investments also entail additional risks. Such investment opportunities may be pursued by the Scheme provided they are considered appropriate in terms of the overall investment objectives of the Scheme.

### PROVISIONS FOR CREATION OF SEGREGATED PORTFOLIO

SEBI has, vide circular no. SEBI/HO/IMD/DF2/CIR/P/2018/160 dated December 28, 2018 and circular no. SEBI/HO/IMD/DF2/CIR/P/2019/127 dated November 07, 2019, permitted creation of segregated portfolio of debt and money market instruments by mutual funds schemes, in order to ensure fair treatment to all investors in case of a credit event and to deal with liquidity risk.

#### Explanations:

- 1) The term 'segregated portfolio' means a portfolio, comprising of debt or money market instrument affected by a credit event, that has been segregated in a mutual fund scheme.
- 2) The term 'main portfolio' means the scheme portfolio excluding the segregated portfolio.
- 3) The term 'total portfolio' means the scheme portfolio including the securities affected by the credit event.

**Creation of segregated portfolio shall be subject to guidelines specified by SEBI from time to time and includes the following:**

- 1) Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA), as under:
  - a) Downgrade of a debt or money market instrument to 'below investment grade', or
  - b) Subsequent downgrades of the said instruments from 'below investment grade', or
  - c) Similar such downgrades of a loan rating
- 2) In case of difference in rating by multiple CRAs, the most conservative rating shall be considered. Creation of segregated portfolio shall be based on issuer level credit events as mentioned above and implemented at the ISIN level.
- 3) Segregated portfolio of unrated debt or money market instruments may be created only in case of actual default of either the interest or principal amount.
- 4) Creation of segregated portfolio is optional and is at the discretion of the AMC.

The AMC shall inform AMFI immediately about the actual default by the issuer. Upon being informed about the default, AMFI shall immediately inform the same to all AMCs. Pursuant to dissemination of information by AMFI about actual default by the issuer, the AMC may segregate the portfolio of such instrument.

#### Process for Creation of Segregated Portfolio:

- 1) On the date of credit event or actual default, AMC should decide on creation of segregated portfolio. Once AMC decides to segregate portfolio, it would:
  - a) seek approval of the Trustees prior to creation of the segregated portfolio.
  - b) immediately issue a press release disclosing its intention to segregate such debt and money market instrument and its impact on the investors. Baroda BNP Paribas Mutual Fund will also disclose that the segregation shall be subject to Trustee approval. Additionally, the said press release will be prominently disclosed on the website of the AMC ([www.barodabnp-paribasmf.in](http://www.barodabnp-paribasmf.in)).
  - c) ensure that till the time the Trustee approval is received, which in no case shall exceed 1 business day from the day of credit event or actual default, the subscription and redemption in the scheme will be suspended for processing with respect to creation of units and payment on redemptions.
- 2) Once Trustee approval is received by the AMC:
  - a) Segregated portfolio will be effective from the day of credit event or actual default.

## SCHEME INFORMATION DOCUMENT

- b) AMC shall issue a press release immediately with all relevant information pertaining to the segregated portfolio. The said information will also be submitted to SEBI.
  - c) An e-mail or SMS will be sent to all unit holders of the concerned scheme.
  - d) The NAV of both segregated portfolio and main portfolio will be disclosed from the day of the credit event or actual default.
  - e) All existing investors in the scheme as on the day of the credit event or actual default will be allotted equal number of units in the segregated portfolio as held in the main portfolio.
  - f) No redemption and subscription will be allowed in the segregated portfolio. However, upon recovery of any money from segregated portfolio, it will be immediately distributed to the investors in proportion to their holding in the segregated portfolio.
  - g) AMC should enable listing of units of segregated portfolio on the recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests
  - h) Investors redeeming their units will get redemption proceeds based on the NAV of main portfolio and will continue to hold the units of segregated portfolio.
- 3) If the Trustees do not approve the proposal to segregate portfolio, AMC will issue a press release immediately informing investors of the same.
  - 4) In case Trustees do not approve the proposal of segregated portfolio, subscription and redemption applications will be processed based on the NAV of total portfolio.
  - 5) 'Segregation of Portfolio', for schemes allowing 'Special features' investments: Segregated portfolio can also be created for debt instruments with special features in case if the instrument is to be written off or converted to equity upon trigger date as per SEBI circular SEBI/HO/IMD/DF4/CIR/P/2021/032 dated March 10, 2021.

The AMC shall inform AMFI immediately about the actual default by the issuer. Upon being informed about the default, AMFI shall immediately inform the same to all AMCs. Pursuant to dissemination of information by AMFI about actual default by the issuer, the AMC may segregate the portfolio of such instrument.

### Processing of Subscription and Redemption Proceeds:

Notwithstanding the decision to segregate the debt and money market instrument, the valuation process shall take into account the credit event and the portfolio shall be valued based on the principles of fair valuation (i.e. realizable value of the assets) in terms of the relevant provisions of SEBI MF Regulations, 1996 and circular(s) issued thereunder.

All subscription and redemption requests for which NAV of the day of credit event or subsequent day is applicable will be processed as per the existing SEBI guidelines/circular on applicability of NAV as under:

- 1) Upon Trustees' approval to create a segregated portfolio -
  - Investors redeeming their units will get redemption proceeds based on the NAV of main portfolio and will continue to hold the units of segregated portfolio.
  - Investors subscribing to the scheme will be allotted units only in the main portfolio based on its NAV.
- 2) In case Trustees do not approve the proposal of segregated portfolio, subscription and redemption applications will be processed based on the NAV of total portfolio.

### Disclosure:

In order to enable the existing as well as the prospective investors to take informed decision, the following, as mandated by SEBI vide SEBI circular dated December 28, 2018 shall be adhered to:

The scheme performance shall clearly reflect the fall in NAV to the extent of the portfolio segregated due to the credit event or actual default and the said fall in NAV along with recovery(ies), if any, shall be disclosed as a footnote to the scheme performance.
- 6) The disclosures at point (4) and (5) above regarding the segregated portfolio shall be carried out for a period of at least 3 years after the investments in segregated portfolio are fully recovered/ written-off.
- 7) The investors of the segregated portfolio shall be duly informed of the recovery proceedings of the investments of the segregated portfolio. Status update may be provided to the investors at the time of recovery and also at the time of writing-off of the segregated securities.

### Monitoring by Trustees:

In order to ensure timely recovery of investments of the segregated portfolio, the Trustee shall ensure that:

- The AMC puts in sincere efforts to recover the investments of the segregated portfolio.
- Upon recovery of money, whether partial or full, it shall be immediately distributed to the investors in proportion to their holding in the segregated portfolio. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio.

- The Trustee shall monitor the compliance of the same as per the SEBI circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.

In order to avoid mis-use of segregated portfolio, Trustees will put in place a mechanism to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs) etc. involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of AMC, including claw back of such amount to the segregated portfolio of the scheme.

### I. WHAT ARE THE INVESTMENT RESTRICTIONS?

Pursuant to the SEBI Regulations, the following investment restrictions are applicable to the scheme:

- 1) The Scheme shall not invest more than 10 per cent of its NAV in equity shares or equity related instruments of any company. Provided that, the limit of 10 per cent shall not be applicable for investments in index fund or sector or industry specific scheme.

## SCHEME INFORMATION DOCUMENT

As laid down by SEBI Circular MFD/CIR/09/014/2000, dated January 5, 2000, the proviso to Clause 10 of the Seventh Schedule to the SEBI (Mutual Funds) Regulations, 1996 provides that for a sector scheme, the upper ceiling on investments will be in accordance with the weightage of the scrips in the representative sectoral index as disclosed in the SID, or 10% of the NAV of the scheme, whichever is higher. As the Scheme is a sector scheme, the upper ceiling on its investments in any listed scrip will be according to the weightage of the scrip concerned in its benchmark index as laid down in its SID, viz., CNX Bank Index, or 10% of its net assets, whichever is higher.

The following illustrates the application of this investment restriction. Let us assume that (i) the weightage of ICICI Bank Ltd. in CNX Bank Index at the time of investment by the Scheme in ICICI Bank Ltd. is 32.50% and (ii) the Net Assets of the Scheme are Rs. 100 crores. As per the restriction, the Scheme can invest in the shares of ICICI Bank Ltd. upto the higher of 10% of its net assets (10% of Rs. 100 crores = Rs. 10 crore) or as per the weightage of ICICI Bank Ltd. in CNX Bank Index (32.50% of Rs. 100 crores = Rs. 32.50 crore). As Rs. 32.50 crore is the higher of the two, the Scheme can invest upto Rs. 32.50 crore in the shares of ICICI Bank Ltd.

The above illustration uses hypothetical numbers and is meant only to explain to investors how this investment restriction will apply to the Scheme.

- 1) The Mutual Fund under all its schemes should not own more than 10 per cent of any company's paid up capital carrying voting rights.
- 2) All investments by a mutual fund scheme in equity shares and equity related instruments shall only be made provided such securities are listed or to be listed.
- 2) Issuer level exposure limits: A mutual fund scheme shall not invest more than 10% of its NAV in debt instruments comprising money market instruments and non-money market instruments issued by a single issuer which are rated not below investment grade by a credit rating agency authorised to carry out such activity under the Act.

Such investment limit may be extended to 12% of the NAV of the scheme with the prior approval of the Trustees or Board of AMC or a Committee constituted in this behalf.
