Load Structure

Exit Load: If units of the Scheme are redeemed or switched out up to 10% of the units (the limit) within 12 months from the date of allotment - Nil

• If units of the scheme are redeemed or switched out in excess of the limit within 12 months from the date of allotment - 1% of the applicable NAV.

• If units of scheme are redeemed or switched out after 12 months from the date of allotment - Nil

For detailed load structure please refer Scheme Information Document.

**The scheme is a 'Transferee Scheme', and accordingly, the ratios are being provided considering the weighted average NAVs of both the Transferor Scheme and Transferee Scheme.

*Monthly AAUM and AUM - Excluding inter-scheme Investments, if any, by other schemes of Baroda BNP Paribas Mutual Fund, as may be applicable

ABOUT THE FUND

- Baroda BNP Paribas Aggressive Hybrid Fund invests primarily in equity and equity related securities and also in debt and money market instruments to generate income and capital appreciation.
- The fund's strategy seeks to generate income and capital appreciation by taking advantage of diversification by investing in a mix of asset classes comprising equity & equity related instruments and fixed income securities including money market instruments.
- It also aims to manage risk through active selection within the specified asset allocation range. The aim is to improve risk adjusted returns through diversification across these asset classes.
- The equity portion of the portfolio aims to provide long-term capital growth through a diversified and actively managed portfolio of equity and equity related securities.
- The focus would be to build a diversified portfolio of both value and growth companies, all companies selected will be analysed taking into account the business fundamentals, the company's financial strength, industry structure, management quality, future earnings expectations and sensitivity of earnings.
- The debt portion of the portfolio will be actively managed based on the AMC's view on interest rates. The price of fixed income instruments varies with changes in interest rates.
- This fund is suitable for investors looking for the advantage of capital appreciation and low volatility compared to other equity funds along with wealth creation in the long term.

PORTFOLIO POSITIONING

Equity:

- The 65:35 hybrid index was up 287bps for the month of April with equity returns beating the benchmark by ~25bps. This made it in the second up-month in succession after the February downmove. Equity, in general benefitted from the relief rally post the Trump tariff D-day of 2nd April after the Trump administration deferred tariffs for 90 days to negotiate reciprocal arrangements. Fixed income also gained from the rate cut from the RBI which was accompanied by ample infusions of liquidity.
- The fund ran an equity exposure of ~69.2% - up 120bps over the prior month backed by the performance on equity, marginally lower than the prior month. Large caps exposure is up sharply to 77% (~75bps over the prior month) of overall equity exposures. REIT's and INVIT's accounted for ~1.22% with the balance across debt investments.
- Given the recent RBI actions, one of the notable shifts was the addition to weights on the BFSI space. We cut some exposures to consumer discretionary, industrials and technology to create space for the BFSI addition.
- From a cap curve perspective, the 120bps addition to equity was funded almost entirely by trimming out on mid and small caps.

Debt:

- MPC reduced repo rate by 25bps to 6% with a change in stance to 'accommodative' to support growth.
- With the RBI Transfusing liquidity aggressively, we expect a 25bps more rate cut in June-25 policy, for smooth monetary transmission.
- RBI is looking at keeping liquidity in surplus near to 1% of NDTL (surplus of INR 2.2tn).
- The MPC has revised its FY26 growth estimate lower to 6.5% as against the February estimate of 6.7%. Inflation forecast has also been revised lower to 4% for FY 26
- The MPC has also revised its FY26 CPI projection lower to target of 4% (4.2% earlier)
- With the RBI's Rate cut and Active Fx swaps and OMOs, we expect further 25bps cut in June -25 for better transmission of rates.
- We have also increased the duration of the scheme to 4.30 years compared to 3.23 years last month.
- We remain invested in small amounts in AAA REITS, INVITS and PTCs with an intention to generate alpha over debt returns from a medium-term perspective.
- The scheme remains open to tactical duration calls apart from maintaining a reasonably attractive carry through corporate bonds.

Income Distribution cum Capital Withdrawal (IDCW) HISTORY (Regular Plan - IDCW Option)

Record Date	Distribution Rate Per Unit (₹) Individual/ others	Cum--IDWC NAV (₹)
27-Aug-2024	0.14	18.42
27-Sep-2024	0.14	18.84
29-Oct-2024	0.14	17.81

Last 3 IDCW declared for IDCW option.
Pursuant to distribution under Income Distribution cum Capital Withdrawal (IDCW) option, NAV of the IDCW option of the scheme(s) would fall to the extent of pay-out and statutory levy (if applicable). The amounts under IDCW options can be distributed out of investors capital (Equalization Reserve), which is part of sale price that represents realized gains. Past performance may or may not be sustained in future and is not a guarantee of any future returns. The above stated distribution rate per unit is net distribution rate after deducting applicable taxes. The above distribution rates are on face value of Rs 10 per unit. Face value may change depending upon FV of the scheme.

DISCLAIMERS

Debt Quants - The information contained in this report has been obtained from sources considered to be authentic and reliable. The quantitative data does not purport to be an offer for purchase and sale of mutual fund units.

#Key Statistical Ratios - The information contained in this report has been obtained from sources considered to be authentic and reliable. This quantitative data does not purport to be an offer for purchase and sale of mutual fund units. The risk free rate of return considered for calculation of Sharpe ratio is 6.00% as per 1 day MIBOR rate on the last business day of the month. Sharpe Ratio (annualised), Standard Deviation (annualised) and Beta are based on last 36 monthly data points. Information ratio aims to show consistency in generating excess returns relative to benchmark, which is measured by the tracking error. Tracking error is the measure of the deviation from the benchmark.

Portfolio Positioning, Top 10 Sectors/Stocks - details contained herein is for general information purposes only and does not indicate assurance of future Scheme performance. The sector(s)/stock(s) mentioned in this document do not constitute any recommendation of the same and Baroda BNP Paribas Mutual Fund may or may not have any future position in these sector(s)/stock(s). Further, the portfolio of the Scheme is subject to changes within the provisions and limitations of Scheme Information Document (SID). For further details on asset allocation, investment strategy and risk factors of the Scheme please refer to SID available on our website (www.barodabnpparibasmf.in).

NAV Movement (Rs. 10,000 Invested at Inception) - All returns are for Regular Plan - Growth Option. **Past performance may or may not be sustained in future and is not a guarantee of any future returns.** Returns do not take into account the load, if any.

SIP Performance - Returns do not take into account the load and taxes, if any. The data assumes investments in Regular Plan - Growth option. % CAGR Returns are computed after accounting for the cash flow by using the XIRR method (investment internal rate of return). the above investment simulation is for illustrative purpose only and should not be construed as a promise on minimum returns and safeguard of capital. the AMC/ Mutual fund is not guaranteeing or forecasting or promising any return. SIP does not assure a profit or guarantee protection against loss in a declining market.

IDCW History - Past performance may or may not be sustained in future and is not a guarantee of any future returns. Pursuant to payment of IDCW, the NAV of the Scheme has fallen to the extent of IDCW distribution and statutory levy (if any). Declaration of IDCW is subject to the availability of distributable surplus under the Option and there is no assurance or guarantee to Unit holders as to the rate of IDCW distribution nor will that dividend be paid regularly. The above IDCW are on face value of ₹ 10 per unit.

Market Capitalization as per SEBI - Large Cap: 1st - 100th company, Mid Cap: 101st - 250th company and Small Cap: 251st company onwards in terms of full market capitalization

Concept of Macaulay duration - The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.

The risks associated with investments in equities include fluctuations in prices, as stock markets can be volatile and decline in response to political, regulatory, economic, market and stock-specific development etc. Please refer to Scheme Information Document for detailed Risk Factors, asset allocation, investment strategy etc. The material contained herein has been prepared without regard to the individual financial circumstances and objectives of persons who receive it.
