*Monthly AAUM and AUM - Excluding inter-scheme Investments, if any. by other schemes of Baroda BNP Paribas Mutual Fund, as may be applicable

ABOUT THE FUND

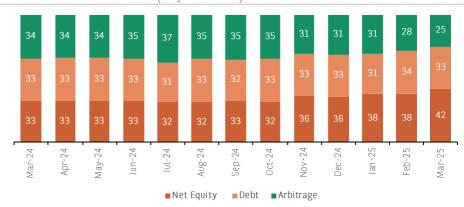

- The Scheme has a dual objective of generating capital appreciation and income by using arbitrage opportunities by investing in equity and equity related securities as well as generating income by investing in debt and money market securities, while attempting to manage risk from the market through active asset allocation.
- Under normal circumstances, the scheme may invest upto a maximum of 50% in unhedged equity and upto 35% in debt and money market instruments. The balance would be invested in the arbitrage strategy using equity futures. The scheme may also invest in InVITS and REITs (upto 10% of the net assets)
- The AMC has built a proprietary model for asset allocation based on the valuations and fundamentals of the companies. The asset allocation between equity and debt will be determined by the model and the top-down process will help in deciding the sector allocation while the bottom up process would lead to construction of the portfolio using specific securities.
- The model is updated on a monthly basis to decide the asset allocation. Generally, once the allocation is fixed, it will not be changed till the next month except in case of extraordinary situations where extreme volatility in the markets would force a change in asset allocation.
- The portfolio would be constructed based on top-down as well as bottom up approach using our core principle of investing, GARP (Growth at a Reasonable Price).
- The scheme is suitable for investors who are seeking Long term capital appreciation and income generation through a combination of equity, arbitrage and fixed income instruments.

PORTFOLIO POSITIONING

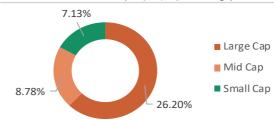

- Net equity exposure at 42.1%.
- Compared to the last month, we have decreased exposure to consumer discretionary, staples and Information technology. Increased exposure to materials, Financials and industrials.
- Mid and small cap exposure at 38% vs 36%, month on month. Large Cap exposure stands at 62% vs 64%
- We are UW on Information Technology, Utilities, staples, real estate and Overweight on consumer discretionary, healthcare, and industrials.

- The weighted average overnight Rates eased by 50bps from 6.60%-6.65% in February-25 to 6.10-6.15% in March-25. The liquidity deficit has seen a slow decline in March-25, compared to peak deficits later this year. However, it turned into surplus at the month end due to huge government spending and OMOs.
- We have allocated a small amount in units of REITS and INVITS with an intention to generate alpha over debt returns from a medium-term
- The scheme has invested in short to medium term corporate bonds and G-secs of across tenor
- The scheme remains open to taking tactical duration calls

SIP does not assure a profit or guarantee protetion against loss in a declining market.

Market Capitalization as per SEBI - Large Cap: 1st - 100th company, Mid Cap: 101st - 250th company and Small Cap: 251st company onwards in terms of full market capitalization.

Concept of Macaulay duration - The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.

The risks associated with investments in equities include fluctuations in prices, as stock markets can be volatile and decline in response to political, regulatory, economic, market and stock-specific development etc. Please refer to Scheme Information Document for detailed Risk Factors, asset allocation, investment strategy etc. The material contained herein has been prepared without regard to the individual financial circumstances and objectives of persons who receive it.
