For detailed load structure please refer Scheme Information Document of the scheme.

\*Monthly AAUM and AUM - Excluding inter-scheme Investments, if any, by other schemes of Baroda BNP Paribas Mutual Fund, as may be applicable

## ABOUT THE FUND

- The Scheme has a dual objective of generating capital appreciation and income by using arbitrage opportunities by investing in equity and equity related securities as well as generating income by investing in debt and money market securities, while attempting to manage risk from the market through active asset allocation.
- Under normal circumstances, the scheme may invest upto a maximum of 50% in unhedged equity and upto 35% in debt and money market instruments. The balance would be invested in the arbitrage strategy using equity futures. The scheme may also invest in InVITS and REITs (upto 10% of the net assets)
- The AMC has built a proprietary model for asset allocation based on the valuations and fundamentals of the companies. The asset allocation between equity and debt will be determined by the model and the top-down process will help in deciding the sector allocation while the bottom up process would lead to construction of the portfolio using specific securities.
- The model is updated on a monthly basis to decide the asset allocation. Generally, once the allocation is fixed, it will not be changed till the next month except in case of extraordinary situations where extreme volatility in the markets would force a change in asset allocation.
- The portfolio would be constructed based on top-down as well as bottom up approach using our core principle of investing, GARP (Growth at a Reasonable Price).
- The scheme is suitable for investors who are seeking Long term capital appreciation and income generation through a combination of equity, arbitrage and fixed income instruments.

## PORTFOLIO POSITIONING

### Equity:

- Net equity exposure at 41.46%.
- Compared to the last month, we have decreased exposure to consumer discretionary & healthcare. Increased exposure to Financials & information technology.
- Mid and small cap exposure at 34%, vs 36% last month. Large Cap exposure stands at 66% vs 64% last month.
- We are UW on energy, utilities, communication services & consumer staples and Overweight on consumer discretionary, Financials & information technology.

### Debt:

- The primary objective of the Scheme is to generate capital appreciation and income by using arbitrage opportunities, investment in equity / equity related instruments and debt/ money market instruments
- The fixed income portion intends to keep the duration of the fund in the range of 3.50 years - 4.50 years as per constructive interest rate view.
- To achieve the same, we have allocated in mix of ~45%-55% strategy in terms of GSEC: Corporate bond composition.
- The corporate bond exposure comprises of mix of AAAs (~90%) as well as some carry assets up to AA- (~10%) ranging from 2-5yr maturity to get the accrual benefit of 70-200bps compared to GSEC.
- The Fund also intends to maintain its allocation to units of REITs/InVits to enhance the potential return of the fund.
- Further, we will be open to taking tactical duration calls whenever opportunity arises

Record Date	Distribution Rate Per Unit (₹) Individual/others	Cum--IDWC NAV (₹)
28-Mar-22	0.75	12.30
27-Mar-23	0.83	11.80
27-Mar-25	1.09	13.83

Pursuant to distribution under Income Distribution cum Capital Withdrawal ("IDCW") option, NAV of the IDCW option of the scheme(s) would fall to the extent of pay-out and statutory levy (if applicable). The amounts under IDCW options can be distributed out of investors' capital (Equalization Reserve), which is part of sale price that represents realized gains. **Past performance may or may not be sustained in future and is not a guarantee of any future returns.** The above stated distribution rate per unit is net distribution rate after deducting applicable taxes. The above distribution rates are on face value of Rs 10 per unit. Face value may change depending upon EV of the scheme.

**Concept of Macaulay duration** - The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.

**Mutual Fund investments are subject to market risks. read all scheme related documents carefully**
