*Monthly AAUM and AUM - Excluding inter-scheme Investments, if any, by other schemes of Baroda BNP Paribas Mutual Fund, as may be applicable

ABOUT THE FUND

- Baroda BNP Paribas Gilt fund invests in securities issued by the Central and State Governments across all maturities
- The portfolio is based on the interest rate outlook and the duration of the fund is actively managed
- The fund has low credit risk portfolio since it invests only in instruments issued by the Central and State Governments
- The interest rate outlook is informed by multiple factors; macro-economic variables like inflation, growth, etc. as well as other market linked variables like liquidity, currency, money supply etc.
- The fund is suitable for investors seeking to take calls on interest rate movements and benefit from any potential capital appreciation.

PORTFOLIO POSITIONING

- The weighted average overnight Rates eased by 50bps from 6.60%-6.65% in February-25 to 6.10-6.15% in March-25.
- Headline inflation has softened to 3.61% y/y in February-25 led by a continued decline in vegetable prices.
- The government has pegged H1FY26 gross g-sec borrowing at INR 8trn, which is 54% of full year borrowing. This is in line with the issuance pattern year of H1FY25 where actual issuance was 53% of full year.
- The amount to be borrowed in 5yr segment as well as 10yr segment has gone up whereas the supply in the long bonds (30yr to 50yr) is lower versus last year.
- The Spread between 30yr and 10yr has reduced to 37bps from 42bps.
- The Spread of 10yr SDL wrt. To 10yr Gsec reduced to 32bps from 44bps last month.
- Having said that the overall reduction in borrowing duration is positive for bonds.
- The fundamentals of India's fiscal demand supply remain balanced and that is expected to maintain a downside bias on yields.
- With the RBI Transfusing liquidity aggressively, we expect a 25bps in April-25 policy and a change in stance from neutral to accommodative, for smooth monetary transmission.
- We intend to keep the duration of the portfolio around 7-7.5 years. The scheme remains open to taking tactical duration calls and increase allocation towards SDLs as spreads remain attractive.

Product Labelling

Baroda BNP Paribas Gilt Fund
(An open-ended debt scheme investing in government securities across maturity. A Relatively High Interest Rate Risk and Low Credit Risk)
This product is suitable for investors who are seeking*:

- Credit risk free regular Income over long term.
- Investment only in Government (both Central and State Government) Securities.

Scheme Riskometer^^

Investors understand that their principal will be at Moderate risk.

Benchmark (Tier 1) Riskometer^

Benchmark riskometer is at Moderate risk.

^^Riskometer For Scheme: basis it's portfolio, ^Riskometer For Benchmark (CRISIL Dynamic Gilt Index): basis it's constituents; as on March 31, 2025

***Investors should consult their financial advisers if in doubt about whether the product is suitable for them.**

Potential Risk Class (PRC) matrix*			
Credit Risk (Max)→	Relatively Low: Class A (CRV>=12)	Moderate: Class B (CRV>=10)	Relatively High: Class C (CRV<10)
Interest Rate Risk (Max)↓			
Relatively Low: Class I (MD<=1 year)			
Moderate: Class II (MD<=3 year)			
Relatively High: Class III (Any MD)	A-III		

MD=Macaulay Duration, CRV=Credit Risk Value.

The above PRC matrix denotes the maximum risk that the Scheme can take i.e. maximum interest rate risk (measured by MD of the scheme) and maximum credit risk (measured by CRV of the scheme).

Data as on March 31, 2025

**The word 'more' does not imply more returns or assurance of scheme performance it refers to the additional value provided by the joint venture, as compared to Baroda AMC and BNP Paribas AMC individually

DISCLAIMERS

+Concept of Macaulay duration - The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.

#Top 10 Holdings - The sector(s)/stock(s) mentioned in this document do not constitute any recommendation of the same and Baroda BNP Paribas Mutual Fund may or may not have any future position in these sector(s)/stock(s).
