## ABOUT THE FUND

Baroda BNP Paribas Money Market fund (MMF) is an open-ended debt scheme that invests solely in money market instrument with upto one year maturity, which are also often referred to as money market instruments. These investments are short-term liquid investments with high credit rating. The purpose of this scheme is to provide investors with a safe investment option which are characterized as a low-risk, low-return investment. It enables investors to earn Money market yields otherwise available for large & Institutional investors. Investors with a short investment horizon or with surplus cash and low risk appetite can invest in money market funds.

## PORTFOLIO POSITIONING

- The primary objective of the Scheme is to provide reasonable returns, commensurate with low risk while providing a high level of liquidity, through investments made in money market instruments.
- The Fund intends to maintain high credit quality by investing more than 85% in AAA/Sov assets.
- Banking Liquidity largely remained in surplus during the month with overnight rates below the repo rate
- At current money market curve, the Fund intends to maintain the average maturity of the fund within 175-200 days in a calibrated manner by allocating more to 6-12 month maturity assets which is currently attractive on the yield curve.

**Income Distribution cum Capital Withdrawal (IDCW) HISTORY** (Regular Plan - IDCW Option)

Record Date	Distribution Rate Per Unit (₹) Individual/others	Cum--IDWC NAV (₹)
29-Dec-25	5.94	1021.20
27-Jan-26	5.93	1018.20
27-Feb-26	5.93	1018.22

Last 3 IDCW declared for IDCW option.

Pursuant to distribution under Income Distribution cum Capital Withdrawal ('IDCW') option, NAV of the IDCW option of the scheme(s) would fall to the extent of pay-out and statutory levy (if applicable). The amounts under IDCW options can be distributed out of investors' capital (Equalization Reserve), which is part of sale price that represents realized gains. Past performance may or may not be sustained in future and is not a guarantee of any future returns. The above stated distribution rate per unit is net distribution rate after deducting applicable taxes. The above distribution rates are on face value of Rs 10 per unit. Face value may change depending upon FV of the scheme.

**Product labelling**

**Baroda BNP Paribas Money Market Fund**

(An open-ended debt scheme investing in money market instruments. A Relatively Low Interest Rate Risk and Moderate Credit Risk)

This product is suitable for investors who are seeking\*:

**Scheme Riskometer<sup>^^</sup>**

Investors understand that their principal will be at Low to Moderate risk.

**Benchmark (Tier 1) Riskometer<sup>^^</sup>**

Benchmark riskometer is at Low to Moderate risk.

<sup>^^</sup>Riskometer For Scheme: basis it's portfolio, <sup>^^</sup>Riskometer For Benchmark (CRISIL Money Market A-I Index): basis it's constituents; as on February 27, 2026

\*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Data as on February 27, 2026

Potential Risk Class (PRC) matrix*			
Credit Risk (Max)–	Relatively Low: Class A (CRV>=12)	Moderate: Class B (CRV>=10)	Relatively High: Class C (CRV<10)
Interest Rate Risk (Max) :			
Relatively Low: Class I (MD<=1 year)		B-I	
Moderate: Class II (MD<=3 year)			
Relatively High: Class III (Any MD)			

MD=Macaulay Duration, CRV=Credit Risk Value.

The above PRC matrix denotes the maximum risk that the Scheme can take i.e. maximum interest rate risk (measured by MD of the scheme) and maximum credit risk (measured by CRV of the scheme).

## DISCLAIMERS

**†Concept of Macaulay duration** - The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.
