\*Monthly AAUM and AUM - Excluding inter-scheme Investments, if any, by other schemes of Baroda BNP Paribas Mutual Fund, as may be applicable

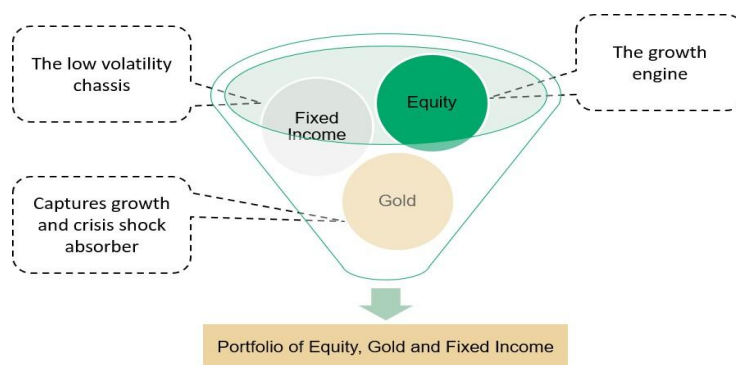

## ABOUT THE FUND

- The scheme intends to seek long term capital growth by investing in equity and equity related securities, debt & money market instruments, REITs / InvITS and Gold ETF.
- The scheme intends to give access to multiple asset classes, which saves the hassle of investing, tracking and maintaining investments in multiple strategies / funds.
  - Investing in Equities aim to provide Capital Appreciation, build wealth in the long term and helps to meet long term financial goals of an investor.
  - Investing in fixed income asset class aims to help with income generation and help to mitigate the volatility of the equity market by diversifying in fixed income instrument.
  - Gold is an international asset class and may help with growth in the long run. It is used to hedge against inflation and the adverse impact of geo-political events.
- Due to the unique characteristics of each asset class, each of them is suited for a different but complementary role in the portfolio.

## PORTFOLIO POSITIONING

### Equity

- The multi asset product is currently running a portfolio of ~71% equity exposures (up ~300bps over the prior month). Large caps accounted for a further 71% of the equity component with the SMID space accounting for the balance. Gold continued to harden over the month, outperforming equities marginally. This pushed up the gold exposures to ~16% (down 80bps over the prior month as we booked some profits). Of the balance 13%, REIT's & Invits accounted for ~1.5%.
- Within the equity book there were marginal increases to the exposures in consumer staples and materials whereas exposures were cut in utilities, IT and consumer discretionary.
- We continue to be overweight on industrials and telecoms while we are neutral on the financial sector. Given the backdrop of US rate cuts we have cut the magnitude of underweights on materials and the energy sectors.
- Debt:**
- The investment objective of the scheme is to seek to generate long term capital growth by investing in equity and equity related securities, debt & money market instruments, REITs /
- InvITS and Gold ETF
- The fixed income portion intends to keep the duration of the fund in the range of 3.50 years - 4.50 years as per constructive interest rate view.
- To achieve the same, we have allocated in mix of ~30%-70% strategy in terms of GSEC: Corporate bond composition.
- The recent selloff in the fixed income market has resulted in attractive entry point at long end of the Gsec curve, accordingly we have increased weightage to 30-40 yr sovereign bonds.
- The Fund also intends to maintain its allocation to units of REITs/Invits to enhance the potential return of the fund.
- Further, we will be open to taking tactical duration calls whenever opportunity arises

**Market Capitalization as per SEBI** - : Large Cap: 1st - 100th company, Mid Cap: 101st - 250th company and Small Cap: 251st company onwards in terms of full market capitalization.

**NAV Movement (Rs. 10,000 Invested at Inception)** - All returns are for Regular Plan - Growth Option. **Past performance may or may not be sustained in future and is not a guarantee of any future returns** Returns do not take into account the load, if any.

**SIP Performance** - Returns do not take into account the load and taxes, if any. The data assumes investments in Regular Plan - Growth option. % CAGR Returns are computed after accounting for the cash flow by using the XIRR method (Investment internal rate of return), the above investment simulation is for illustrative purpose only and should not be construed as a promise on minimum returns and safeguard of capital. The AMC/ Mutual fund is not guaranteeing or forecasting or promising any return. SIP does not assure a profit or guarantee protection against loss in a declining market

**Concept of Macaulay duration** - The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs

The risks associated with investments in equities include fluctuations in prices, as stock markets can be volatile and decline in response to political, regulatory, economic, market and stock-specific development etc. Please refer to Scheme Information Document for detailed Risk Factors, asset allocation, investment strategy etc. The material contained herein has been prepared without regard to the individual financial circumstances and objectives of persons who receive it.
