** Baroda BNP Paribas Banking and PSU Bond Fund has merged into Baroda BNP Paribas Short Duration Fund effective from October 17, 2025.

Data as on January 30, 2026

ABOUT THE FUND

- Baroda BNP Paribas Short Duration Fund invests in fixed income instruments such that the Macaulay Duration of the portfolio is between 1 to 3 years.
- The Scheme aims to invest in a mix of high quality instruments at the shorter end of the yield curve. These may be commercial paper (CP), certificate of deposit (CDs), government securities, securities issued by private or public sectors companies, etc. The portfolio also aims to offer high liquidity along with moderate duration risk.
- The Scheme remains open to taking tactical duration calls.
- While investing in fixed income instruments, the scheme takes into account various factors affecting the Indian economy, interest rate scenario, and the relative valuation, maturity profile and liquidity of the securities, etc.
- The Scheme is suitable for short term investment horizon.

PORTFOLIO POSITIONING

- The primary objective of the Scheme is to generate regular income by investing in a portfolio of debt and money market instruments such that the Macaulay duration of the portfolio is between 1 to 3 years.
- The Fund intends to maintain high credit quality by investing more than 85% in AAA/Sov assets with a Macaulay duration between 2.25-2.50 years
- We intend to remain invested in 2yr-5yr maturity assets as we believe spreads remain attractive in this segment. In addition, to enhance the accrual of the fund we continue to stay invested in AAA (SO) PTC's which also helps portfolio diversification.
- Further, we will be open to taking tactical duration calls whenever opportunity arises.

Income Distribution cum Capital Withdrawal (IDCW) HISTORY (Regular Plan - IDCW Option)

Record Date	Distribution Rate Per Unit (₹) Individual/others	Cum--IDWC NAV (₹)
27-Nov-25	0.06	10.35
29-Dec-25	0.06	10.30
27-Jan-26	0.06	10.23

Last 3 IDCW declared for IDCW option.

Pursuant to distribution under Income Distribution cum Capital Withdrawal ("IDCW") option, NAV of the IDCW option of the scheme(s) would fall to the extent of pay-out and statutory levy (if applicable). The amounts under IDCW options can be distributed out of investors' capital (Equalization Reserve), which is part of sale price that represents realized gains. Past performance may or may not be sustained in future and is not a guarantee of any future returns. The above stated distribution rate per unit is net distribution rate after deducting applicable taxes. The above distribution rates are on face value of ₹ 10 per unit. Face value may change depending upon FV of the scheme.

Product Labelling

<p>This product is suitable for investors who are seeking*:</p> <ul style="list-style-type: none"> Regular income over short term. Investment predominantly in Money Market Instruments (i.e. CP/CD) and Short Term Debt Market Instruments. <p>*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.</p>	<p>Scheme Riskometer^^</p>  <p>Investors understand that their principal will be at Moderate risk</p>	<p>Benchmark (Tier 1) Riskometer^</p>  <p>Benchmark riskometer is at Low To Moderate risk</p>
<p>^^Riskometer For Scheme: basis it's portfolio, ^Riskometer For Benchmark (CRISIL Short Duration Debt A-II Index): basis it's constituents; as on January 30, 2026</p>		

Potential Risk Class (PRC) matrix*			
Credit Risk (Max)-	Relatively Low: Class A (CRV>=12)	Moderate: Class B (CRV>=10)	Relatively High: Class C (CRV<10)
Interest Rate Risk (Max)			
Relatively Low: Class I (MD<=1year)			
Moderate: Class II (MD<=3year)			
Relatively High: Class III (Any MD)		B-III	

MD=Macaulay Duration, CRV=Credit Risk Value.

The above PRC matrix denotes the maximum risk that the Scheme can take i.e. maximum interest rate risk (measured by MD of the scheme) and maximum credit risk (measured by CRV of the scheme)

DISCLAIMERS

†Concept of Macaulay duration: The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.
