~Dedicated Fund Manager for Overseas Investments:  
 Mr. Shreekirana Rao (managing fund since December 01, 2022)

## ABOUT THE FUND

- Baroda BNP Paribas Short Duration Fund invests in fixed income instruments such that the Macaulay Duration of the portfolio is between 1 to 3 years.
- The Scheme aims to invest in a mix of high quality instruments at the shorter end of the yield curve. These may be commercial paper (CP), certificate of deposit (CDs), government securities, securities issued by private or public sectors companies, etc. The portfolio also aims to offer high liquidity along with moderate duration risk.
- The Scheme remains open to taking tactical duration calls.
- While investing in fixed income instruments, the scheme takes into account various factors affecting the Indian economy, interest rate scenario, and the relative valuation, maturity profile and liquidity of the securities, etc.
- The Scheme is suitable for short term investment horizon.

## PORTFOLIO POSITIONING

- The Federal Reserve raised the fed funds rate by 25 bps to 4.65% and Bank of England raised rates by 50 bps and RBI increased the repo rate by 25 bps in February policy to 6.50%
- December'22 CPI was down to 5.72 from 5.88 in November'22 and MPC is committed towards bringing inflation lower closer to the targeted 4.0% with +/-2% range.
- We expect the 10-year trading in the range of 7.20 - 7.45%.
- The Scheme intends to maintain its average duration in the range of 1.25-2.25 years.
- Shorter End yield was under pressure on expected large issuance amount by banks and Corporates, 1year T-bill also moved higher to 6.98 from last month average of 6.90 levels.
- The scheme remains open to taking tactical duration calls.

**\*Concept of Macaulay duration:**  
The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration.

## DISCLAIMERS

**•Concept of Macaulay duration:** The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.

**Sectoral Composition** - The sector(s)/stock(s) mentioned in this document do not constitute any recommendation of the same and Baroda BNP Paribas Mutual Fund may or may not have any future position in these sector(s)/stock(s). Further, the portfolio of the Scheme is subject to changes within the provisions and limitations of Scheme Information Document (SID). Potential Risk Class (PRC) matrix*			
Credit Risk (Max)→ Interest Rate Risk (Max)↓	Relatively Low: Class A (CRV>=12)	Moderate: Class B (CRV>=10)	Relatively High: Class C (CRV<10)
Relatively Low: Class I (MD<=1 year)			
Moderate: Class II (MD<=3 year)		B-II	
Relatively High: Class III (Any MD)			

MD=Macaulay Duration, CRV=Credit Risk Value.

The above PRC matrix denotes the maximum risk that the Scheme can take i.e. maximum interest rate risk (measured by MD of the scheme) and maximum credit risk (measured by CRV of the scheme).
