ABOUT THE FUND

- Baroda BNP Paribas Ultra Short Duration Fund invests in fixed income instruments such that the Macaulay Duration of the portfolio is between 3 to 6 months.
- The Scheme aims to invest in a mix of high quality instruments at the shorter end of the yield curve. These may be commercial paper (CP), certificate of deposit (CDs), government securities, securities issued by private or public sectors companies, etc. The portfolio also aims to offer high liquidity along with moderate duration risk.
- While investing in fixed income instruments, the scheme takes into account various factors affecting the Indian economy, interest rate scenario, and the relative valuation, maturity profile and liquidity of the securities, etc.
- The Scheme is suitable for very short term investment horizon

PORTFOLIO POSITIONING

- Banking and durable liquidity are currently comfortable, and financial conditions have significantly improved in past four months.
- RBI announced Open Market operations (OMO) purchase of INR 1.25tn for the month of May-25, taking total OMO purchase in FY26 to INR2.45tn.
- RBI liquidity management is focused on faster and more effective transmission of rate cuts.
- Going forward, we expect liquidity to remain in surplus over the next few months, with the flow of funds to the banking system to increase led by RBI dividend transfer (2.6 trillion).
- The weighted average overnight Rates remained at 5.60%-5.75% during the month.
- In order to benefit from a liquidity surplus and potential rate cutting scenario, the scheme is maintaining the Macaulay duration near to the higher end of the range mandated by the regulator and may continue to be invested in that direction.
- Parallely, we have increased the allocation in PTCs rated AAA (SO) to enhance the YTM and benefit from portfolio diversification.

Product Labelling

Baroda BNP Paribas Ultra Short Duration Fund

(An open ended ultra short term debt scheme investing in instruments such that the Macaulay duration[^] of the portfolio is between 3 months and 6 months. A relatively Moderate interest rate risk and Moderate Credit Risk)

This product is suitable for investors who are seeking*:

- Regular income with convenience of liquidity over ultra-short term.
- Investments in a basket of debt and money market instruments such that the Macaulay duration[^] of the portfolio is between 3 months and 6 months.

Scheme Riskometer^{^^}

Investors understand that their principal will be at Low to Moderate risk.

Benchmark (Tier 1) Riskometer[^]

Benchmark riskometer is at Low to Moderate risk.

^{^^}Riskometer For Scheme: basis it's portfolio, [^]Riskometer For Benchmark (CRISIL Ultra Short Duration Debt A-I Index): basis it's constituents; as on May 30, 2025

***Investors should consult their financial advisers if in doubt about whether the product is suitable for them.**

[^]Concept of Macaulay duration:

The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration.

Data as on May 30, 2025

Potential Risk Class (PRC) matrix*			
Credit Risk (Max)-	Relatively Low: Class A (CRV>=12)	Moderate: Class B (CRV>=10)	Relatively High: Class C (CRV<10)
Interest Rate Risk (Max)↓			
Relatively Low: Class I (MD<=1year)			
Moderate: Class II (MD<=3year)		B-II	
Relatively High: Class III (Any MD)			

MD=Macaulay Duration, CRV=Credit Risk Value.

The above PRC matrix denotes the maximum risk that the Scheme can take i.e. maximum interest rate risk (measured by MD of the scheme) and maximum credit risk (measured by CRV of the scheme).

DISCLAIMERS

[†]**Concept of Macaulay duration** - The Macaulay Duration is a measure of a bond’s sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond’s price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond’s cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond’s price, the investor can choose an investment that will better meet his future cash needs.

[#]**Sectoral Composition, Top 10 Holdings** - The sector(s)/stock(s) mentioned in this document do not constitute any recommendation of the same and Baroda BNP Paribas Mutual Fund may or may not have any future position in these sector(s)/stock(s).
