Investment Strategy	<p>The Scheme is an actively managed open-ended debt scheme that seeks to provide returns by investing in a portfolio consisting of money market and debt instruments, government securities and treasury bills. The fund management team would formulate a view on the credit quality, interest rate movement etc., by monitoring parameters linked to corporate performance, economy as well as developments in the global markets. The Scheme may assume moderately higher credit risk as compared to a scheme investing predominantly in AAA bonds / sovereign securities. The portfolio will be constructed in line with the benchmark, and it would be endeavored to actively manage the portfolio so that it is similar to various attributes of benchmark like average maturity, duration etc. Selective capital appreciation opportunities could be explored by extending credit and duration exposure above the benchmark. The key element of investment strategy is having the ability to analyze and price credit risk for short, dated securities.</p> <p>Event based Strategy: Sometimes it is seen that a company with lower credit rating (as assigned by any SEBI approved rating agency) has strong fundamental valuation which indicates that the company would have got better rating. Hence, in anticipation that credit rating of this company would be upgraded by the rating agencies, the fund manager, may at his discretion, invest / increase exposure in such types of companies. Once the upgradation in rating happens, the yield would fall and thus a capital gain / profit would be incurred. In a situation where a company with lower rating / unrated is being acquired by a company with higher credit rating, it is seen that the yield of former one usually falls. The fund manager may, after identifying such opportunities, and at his / her discretion make investments / increase allocation in those lower rated / unrated companies.</p> <p>Credit Spread Strategy: Credit spread, or the yield differential of two companies with different credit rating, is mean-reverting in nature. This means that yield differential can be more or less in various time periods. The fund manager may, at his / her discretion, increase / decrease allocation to companies with different credit ratings to exploit this mean -reversion. E.g. assume a company with AA rating is being traded at 10.35% yield. At the same time, a company with AAA rating is traded at 9.35% yield. Both the instruments have same maturity. After examining the yield differentials of these two companies, it is understood that mean spread (i.e. yield differential) is 50 bps. Since the current spread is 100 bps then it is expected that by nature of mean-reversion the spread will fall to nearly 50 bps. This implies, under a normal economic condition and other factors being unchanged, that the yield of AA rated company would fall.</p>
Risk Profile of the scheme	<p>Mutual Fund units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme Specific Risk Factors are summarized below:</p> <ul style="list-style-type: none"> - Market Risk: All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity. Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. - Concentration Risk The Scheme may pursue only a limited degree of diversification. It may invest in a limited number of securities or invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors as compared to a diversified scheme. The scheme is also expected to have higher market liquidity risk on account of concentration. <p><u>Risks associated with investing in fixed income securities</u></p> <ol style="list-style-type: none"> 1. Credit and Counterparty risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations). Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments

	<p>or the conclusion of financial derivatives contracts.</p> <ol style="list-style-type: none"> Liquidity Risk: The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests. A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. Interest Rate Risk & Re-investment Risk: Interest rates may be influenced by several elements or events, such as monetary policy, discount rate, inflation, etc. Any impact of interest rate changes would be higher on securities with higher duration. Reinvestment risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. Sovereign risk: The credit risk on such Government securities is even lower than that on non-government securities "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating <p><u>Risk Factors associated with Investments in Derivatives</u> Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. Some of the risks inherent to derivatives investments include:</p> <ol style="list-style-type: none"> Price Risk: Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying. Default Risk: This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk. Basis Risk: This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset. Limitations on upside: Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction. Liquidity risk: This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities. <p><u>Risk factors specific to investments in foreign securities</u> The net assets, distributions and income of the Scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation.</p> <p><u>Risks associated with Securities Lending</u> The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in a possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.</p> <p><u>Risk factors associated with investments in repo transactions in corporate debt:</u> The Scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo transactions, the collateral</p>
--	--

	<p>may be sold, and a loss is realized only if the sale price is less than the repo amount. The risk is further mitigated through over-collateralization (the value of the collateral being more than the repo amount).</p> <p><u>Risk Factors associated with investing in debt instrument securities with special features:</u> Pursuant to para 12.2.1 of SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024 dated June 27, 2024 the Scheme may invest in securities having special features viz. subordination to equity (absorbs losses before equity capital) and /or convertible to equity upon trigger of a pre-specified event for loss absorption. Such special features may be available under the Additional Tier I bonds and Tier 2 bonds issued under Basel III framework.</p> <p>These securities having special features will carry and be subject to all the risks associated with the investment in Fixed Income securities like Credit and Counterparty Risk, Liquidity Risk, Interest Rate Risk etc. However investors are requested to note that as these securities are subordinate to all other Fixed Income securities issued by an issuer and only senior to common equity, such securities with special features are more riskier than other Fixed Income Securities of the same issuer.</p> <p><u>Risk factors associated with investments in Credit Default Swaps:</u> Credit default swap is the most common form of credit derivative where the buyer of the swap makes payments to the swap's seller until the maturity date of a contract. In return, the seller agrees that – in the event that the debt issuer defaults or experiences another credit event – the seller will pay the buyer the security's value as well as all interest payments that would have been paid between that time and the security's maturity date. The Scheme may participate in credit Default Swaps (CDS) as a buyer (protection buyer) to hedge/offset credit risk related to fixed income instruments. It is important to note that the credit risk isn't completely eliminated – it has been shifted to the CDS seller. The risk is that the CDS seller defaults at the same time the credit event occurs. In case the debt issuer does not default or no credit event occurs till maturity of CDS contract, the buyer will end up losing money through the payments on the CDS.</p> <p><u>Risk factors associated with investments in REITs and InvITs</u> Investments in REITs/InvITs carry liquidity risk, price risk/market risk, interest rate risk, reinvestment risk, credit risk, regulatory/legal of lower than expected distributions.</p> <p><u>Risk Factors associated with investments in debt instruments having Structured Obligations / Credit Enhancements:</u> The risks factors stated for debt instruments having Structured Obligations / Credit Enhancements are in addition to the risk factors associated with fixed income instruments:</p> <ul style="list-style-type: none"> • SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold. • The credit risk of debt instruments which are CE rated derives rating is based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk. <p><u>Risks associated with segregated portfolio:</u></p> <ol style="list-style-type: none"> 1. Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer. 2. Security comprises of segregated portfolio may not realise any value. 3. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV. 4. Trading in the units of segregated portfolio on the Exchange may be halted because of market
--	---

	<p>conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.</p> <p>In addition to above and to the extent of the corpus of the Scheme investments in certain securities, the Scheme shall be subject to various risk factors including, but not limited to, risks associated with: investments in securitised debt and investments in liquid funds. The Scheme shall also be subject to other risks including risk associated with inflation, legal risk, taxation risk, valuation risk, operational risk & risk factors associated with processing of transaction, in case of investors investing in mutual fund units, through Stock Exchange Mechanism as provided in SID.</p> <p>Different types of securities in which the Scheme would invest as given in the Scheme Information Document/Key Information Memorandum carry different levels and types of risk. The above are some of the common risks associated with investments in various securities.</p> <p>Investors may, if they wish, consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming Units, i.e. before making a decision to invest/redeem Units.</p> <p>Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF): For details on CDMDF, kindly refer SID of the scheme.</p> <p>Investors in the Scheme are not being offered any guaranteed returns. For details on risk factors and risk mitigation measures, please refer SID.</p>								
Plans & Options	<p>The Scheme has two plans thereunder, viz. Regular Plan and Direct Plan.</p> <p>Direct Plan is meant for direct investments, i.e. for investors who purchase/subscribe to the units of the Scheme directly with the Fund and is not available for investors who route their investments through a Distributor, while Regular Plan is meant for investors who route their investments through distributors only. Both Plans will have a common portfolio, but Direct Plan will have a lower expense ratio on account of absence of brokerage and commission. Hence both plans will have distinct NAVs.</p> <p>The Scheme has the following Options:</p> <ul style="list-style-type: none">o Growth (Default)o Monthly IDCW<ul style="list-style-type: none">– Monthly Pay-out of IDCW– Monthly Reinvestment of IDCW (Default)o Quarterly IDCW<ul style="list-style-type: none">– Quarterly Pay-out of IDCW– Quarterly Reinvestment of IDCW(Default) <p>If the IDCW under the Pay-out Option of the Scheme is less than or equal to Rs. 200/-, it will, by default, be reinvested under the Reinvestment sub-option.</p> <p>For detailed disclosure on default plans and options, kindly refer SAI.</p>
