In case the portfolio of scheme is not rebalanced within the aforementioned mandated plus extended timelines, AMCs shall:</p> <ol style="list-style-type: none"> not be permitted to launch any new scheme till the time the portfolio is rebalanced. not to levy exit load, if any, on the investors exiting such scheme(s).
Investment Strategy	<p>The Scheme seeks to invest in a portfolio of fixed income and arbitrage schemes. The portfolio of Scheme seeks to build a risk profile similar to lower risk fixed income schemes. The Scheme would invest in Baroda BNP Paribas Arbitrage Fund for its arbitrage allocation. The portfolio manager would select fixed income scheme or multiple fixed income schemes with differential weights based on their views on macro-economic variables, interest rates, credit environment, etc.</p> <p>The Scheme intends to predominantly invest in debt schemes, thus providing investors a low-risk investment option.</p>
Risk Profile of the Scheme	<p>I. Scheme Specific Risk Factors</p> <p>INVESTORS MAY PLEASE NOTE THAT THEY WILL BE BEARING THE RECURRING EXPENSES OF THE RELEVANT FUND OF FUNDS SCHEME IN ADDITION TO THE EXPENSES OF THE UNDERLYING FUND IN WHICH THE FUND OF FUNDS SCHEME MAKES INVESTMENT.</p> <p>II. The other Scheme specific risk factors are summarized as follows:</p> <ul style="list-style-type: none"> Investments in underlying schemes will have all the risks associated with such schemes including performance of underlying securities, derivative investments, securities lending, changes in credit rating, trading volumes, settlement periods, price/interest rate risk, volatility & liquidity in money markets, basis risk, spread risk, re-investment risk, etc. The investors should refer to the Scheme Information Documents and the related addendum for the scheme specific risk factors and special consideration of the respective Underlying Schemes. Since the Scheme proposes to invest in underlying schemes, the Scheme's performance will depend upon the performance of the underlying schemes and any significant underperformance in even one of the underlying schemes may adversely affect the performance of the Scheme. Any change in the investment policies or the fundamental attributes of the underlying schemes may affect the performance of the Scheme. The investors of the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of the underlying schemes. Hence the investor under the Scheme may receive lower pre-tax returns than what they may receive if they had invested directly in the underlying schemes in the same proportions. The Portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying schemes. The Portfolio rebalancing may result in higher transaction costs. The Scheme's performance may be impacted by exit loads or other redemption charges that may be charged at the time of redemption from the Underlying Schemes. Since the incidence of exit loads on investments made by the Scheme in Underlying Schemes of the Fund is based on first-in, first-out principle, it is anticipated that the impact of such exit loads/ redemption charges could be minimal during the normal course of functioning of the Scheme. In the event of receipt of an inordinately large number of redemption requests and inability of the Underlying Scheme(s) to generate enough liquidity because of market conditions, there may be delays in redemption of units. <p>Market Risk:</p> <p>All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity. Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.</p>

Risks associated with investing in fixed income securities:

1. **Credit and Counterparty risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts.

The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security value.

2. **Liquidity Risk:** The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests.

A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic/corporate event.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme.

The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

3. **Interest Rate Risk & Re-investment Risk:** The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. The value of debt and fixed income securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa. Securities of any issuer that has higher duration could be riskier in terms of price movements relative to those with lower duration. Thus, any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security. The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

4. **Sovereign risk:** The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

5. **Concentration Risk:**

The Scheme may pursue only a limited degree of diversification. It may invest in a limited number of securities or invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors as compared to a diversified scheme. The scheme is also expected to have higher market liquidity risk on account of concentration. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme.

III. Risk Factors related to Underlying Schemes

Baroda BNP Paribas Income plus Arbitrage Active Fund of Funds will invest in units of Arbitrage and Debt-oriented schemes. Hence, scheme specific risk factors and the positioning of the Underlying Schemes will be applicable.

All risks associated with Underlying Schemes, including performance of their underlying securities (equity and debt), derivative instruments, stock-lending, investments in foreign securities etc., will therefore be applicable in the case of this Scheme.

The investors should refer to the Scheme Information Documents and the related addenda for the scheme specific risk factors of the respective Underlying Schemes.

Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the Underlying Schemes. b) Movements in the Net Asset Value (NAV) of the Underlying Schemes may impact the performance of the Scheme.

Any change in the investment policies or fundamental attributes of the Underlying Schemes will affect the performance of the Scheme. c) The investors of the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of the Underlying Schemes (subject to regulatory limits). Hence the investor under the Scheme may receive lower pre-tax returns than what they may receive if they had invested directly in the Underlying Schemes in the same proportions. Further, expenses charged being dependent on the structure and weightage of the underlying schemes, may lead to non-uniform charging of expenses over a period of time. d) The Portfolio disclosure / Factsheet of this Scheme will be limited to providing the particulars of the allocation to the Underlying Schemes where the Scheme has invested and will not include the investments made by the Underlying Schemes. Investors may refer to the portfolios of the relevant underlying schemes for details. e) Redemptions by the Scheme from the Underlying Schemes would be subject to applicable exit loads, which may impact performance of the Scheme. f) Switch-out from an Underlying Scheme and Switch in to another Underlying Scheme will be subject to the provisions of applicability of NAV as also the payout and pay-in cycles applicable to redemption / purchase under the relevant schemes. In times of extreme volatility, this may have impact on the NAV of the Scheme, particularly at the time of portfolio rebalancing. Purchase of units in underlying schemes will attract applicable stamp duty. Baroda BNP Paribas Income plus Arbitrage Active Fund of Funds of Funds - SID g) A Fund Manager managing any one of the Fund of Funds schemes may also be the Fund Manager for the underlying schemes.

Risks associated with investing in equity and equity related instruments:

Investments in equity and equity related instruments are volatile and prone to price fluctuations on a daily basis. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time. Investments in equity and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges.

In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

Risk Factors associated with Investments in Derivatives:

The Scheme(s) may use various derivative instruments and techniques, permitted within SEBI (Mutual Funds) Regulations, 1996 from time to time including but not limited for portfolio balancing and hedging purpose, which may increase the volatility of Scheme's performance. Usage of derivatives will expose the Scheme(s) to certain risks inherent to such derivatives.

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is a possibility that a loss may be sustained by the Scheme(s) as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance.

In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence, the derivative cannot be expected to perfectly hedge the risk of the underlying assets. This also increases the volatility of the Scheme's performance. Some of the risks inherent to derivatives investments include:

1. **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
2. **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
3. **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g., mismatch between the maturity date of the futures and the actual selling date of the asset.
4. **Limitations on upside:** Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
5. **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.
6. **Execution Risk:** The prices which are seen on the screen need not be the same at which execution will take place.

Risks associated with investing in mutual fund units:

To the extent of the investments in units of mutual funds, the risks associated with investing in such funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

Risk factors associated with investment in Tri-Party Repo:

The mutual fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus, reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus, the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

Risks associated with segregated portfolio:

- Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- Security comprises of segregated portfolio may not realise any value.

- Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
- Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.

Other Risks:

- **Risk associated with inflation:** Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
- **Legal risk:** The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.
- **Taxation risk:** The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such, no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this Scheme Information Document (SID) is as available under the prevailing taxation laws. This could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the scheme will endure indefinitely.
- **Valuation risk:** This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.
- **Operational Risk:** Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the Scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme.

Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism: The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

Tracking Error Risk:

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance and changes to the underlying index and regulatory restrictions, lack of liquidity which may result in Tracking Error. Hence it may affect AMC's ability to achieve close correlation with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible.

Tracking Difference: The tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme will be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

The annualized tracking difference averaged over one year period shall not exceed 1.25%. In case the average annualized tracking difference over one year period for the Scheme is higher than 1.25%, the same will be brought to the notice of trustees with corrective actions taken by the AMC, if any

Risk control measures

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The Scheme would predominantly invest in units of Underlying funds of Baroda BNP Paribas Mutual Fund as stated under the asset allocation table; hence the risks of the Underlying Fund will exist. The investors should note that these risks cannot be diffused as these are international funds. However, as part of our due diligence, we have chosen funds, which have long term performance track record, stability of fund management team.

For investments in fixed income instruments, a credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the tri-party repo on Government Securities or treasury bills / repo market, units of mutual fund which seeks to ensure liquidity in the scheme under normal circumstances. There can however be no guarantee against liquidity risk within the scheme.

The AMC may also implement certain internal control procedures / risk & exposure limits etc. for controlling risks which may be varied from time to time.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in Scheme.
