Investment Strategy

The Scheme will predominantly invest in units of Baroda BNP Paribas Gold Exchange Traded Fund and according to the provisions of the SEBI (MF) Regulations. Accordingly, the scheme can buy/sell the units either directly with the fund in creation unit size by way of cash or through the secondary market on the Stock Exchange(s).

The scheme may also invest in debt and money market securities as stated in the asset allocation table. During normal circumstances, the Scheme's exposure to money market instruments will be in line with the asset allocation table.

Risk Profile of the Scheme

Scheme Specific Risk Factors:

- Investors may please note that they will be bearing the expenses of the relevant fund of fund scheme in addition to the expenses of the underlying schemes in which the fund of fund scheme makes investment in.
- The Scheme will invest predominantly in Baroda BNP Paribas Gold Exchange Traded Fund of Baroda BNP Paribas Mutual Fund. Hence the Scheme's performance will depend upon the performance of the underlying mutual fund scheme. Any change in the investment policies or the fundamental attributes of the underlying scheme could affect the performance of the Scheme.
- Investments by Baroda BNP Paribas Gold ETF are subject to availability of gold. If favorable investment opportunities do not exist or opportunities have noticeably diminished, Baroda BNP Paribas Gold ETF may suspend accepting fresh subscriptions. This may also affect acceptance of subscription by the Fund of Fund Scheme.
- The investors of the Scheme will bear dual recurring expenses and possibly dual loads, viz, those of the Scheme and those of the underlying Schemes. Hence the investor under the Scheme may receive lower pre-tax returns than what they could have received if they had invested directly in the underlying Schemes in the same proportions.
- The Portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying Schemes. However, as the scheme proposes to invest only in Baroda BNP Paribas Gold ETF, the underlying assets will by and large be physical gold.
- The changes in asset allocation may result in higher transaction costs.
- The value (price) of gold may fluctuate for several reasons and all such fluctuations will result in changes in the NAV of
 units under the scheme.
- The factors that may effect the price of gold, among other things, include demand and supply for gold in India and in the global market, Indian and Foreign exchange rates, Interest rates, Inflation trends, trading in gold as commodity, legal restrictions on the movement/trade of gold that may be imposed by RBI, Government of India or countries that supply or purchase gold to/from India, trends and restrictions on import/export of golden jewellery in and out of India, etc.
- The Scheme assets are predominantly invested in Baroda BNP Paribas Gold ETF and valued at the market price of the said units on the principal exchange.
- The same may be at a variance to the underlying NAV of the fund, due to market expectations, demand supply of the units, etc. To that extent the performance of scheme shall be at variance with that of the underlying scheme/s.
- The endeavour would always be to get cash on redemptions from the underlying Scheme. However, in case the underlying
 fund is unable to sell for any reason, and delivers physical gold, there could be delay in payment of redemptions proceeds
 pending such realization.
- The Scheme will subscribe according to the value equivalent to unit creation size as applicable for each of the underlying scheme. When subscriptions received are not adequate enough to invest in creation unit size, the subscriptions may be deployed in debt and money market instruments which will have a different return profile compared to gold returns profile.
- The liquidity of the Scheme's investments may be inherently restricted by trading volumes, settlement periods and transfer
 procedures. In the event of an inordinately large number of redemption requests, or of a re-structuring of the Scheme's
 investment portfolio, these periods may become significant.

- Although, the objective of the Scheme is to generate optimal returns, the objective may or may not be achieved.
- The NAV of the scheme to the extent invested in Money market securities are likely to be affected by changes in the
 prevailing rates of interest and are likely to affect the value of the Scheme's holdings and thus the value of the Scheme's
 Units
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is
 limited by the overall trading volume on the stock exchanges. Money market securities, while liquid, lack a well-developed
 secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till
 the security is finally sold.
- Investment decisions made by the AMC may not always be profitable, even though it is intended to generate capital
 appreciation and maximize the returns.
- The tax benefits available under the Scheme are as available under the present taxation laws and are available only to certain specified categories of investors and that is subject to fulfilment of the relevant conditions. The information given is included for general purposes only and is based on advice that the AMC has received regarding the law and the practice that is currently in force in India and the investors and the Unitholders should be aware that the relevant fiscal rules and their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor/Unitholder is advised to consult his/her own professional tax advisor.
- All risks associated with the underlying scheme, including performance of underlying physical gold, asset class risk, passive
 investment risk, indirect taxation risk etc. will be applicable to this scheme. Investors who intent to invest in this scheme
 are required to and deemed to have understood the risk factors of the underlying scheme.

Risks Associated with investing In Underlying Schemes (As Applicable):

The scheme specific risk factors of the underlying schemes become applicable where a fund of funds invests. Investors who intend to invest in Fund of Funds are required to and are deemed to have read and understood the risk factors of the underlying scheme in which the Fund of Funds scheme invest in Scheme Information Document, are available at the Customer Service Centers or may be accessed at www.barodabnpparibasmf.in

Right to Limit Redemptions:

The Trustee, in the general interest of the Unit holders of the Scheme offered in this Document and keeping in view the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day. The limit may be decided depending on the total "Underlying stock of gold" that can be readily sold in the local market with the underlying fund. The same shall be in accordance with paragraph 1.12 of SEBI Master circular for Mutual Funds dated June 27, 2024 (Restriction on redemption in Mutual Funds).

Market Risk:

Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved. The NAV of the Scheme will react to the prices of gold, Gold Related Instruments and stock market movements. The Unit holder could lose money over short periods due to fluctuation in the NAV of the Scheme in response to factors such as economic and political developments, changes in interest rates and perceived trends in stock prices market movements, and over longer periods during market downturns.

Currency Risk:

The formula for determining NAV of the Units of Baroda BNP Paribas Gold ETF is based on the imported (landed) value of gold. BBNPP Gold ETF landed value of gold is computed by multiplying international market price of gold by US dollar value. The value of gold or NAV, therefore will depend upon the conversion value of US Dollar into Indian rupee and attracts all the risks attached to such conversion.

Counterparty Risk:

There is no exchange for physical gold in India. BBNPP Gold ETF may have to buy and sell gold from the open market, which may lead to counter party risks for the scheme for trading and settlement.

Additionally, the prices of gold may be affected by several factors such as global gold supply and demand, investors' expectations with respect to the rate of inflation, currency exchange rates, interest rates, etc. Crises may motivate large-scale sales of gold, which could decrease the domestic price of gold.

Some of the key factors affecting gold prices are as follows:

Central banks' sale: Central banks across the world hold a part of their reserves in gold. The quantum of their sale in the market is one of the major determinants of gold prices. A higher supply than anticipated would lead to subdued gold prices and vice versa. Central banks buy gold to augment their existing reserves and to diversify from other asset classes. This acts as a support factor for gold prices.

Producer mining interest: Bringing new mines on-line is a time consuming and at times economically prohibitive process that adds years onto potential supply increases from mining production. On the other hand, lower production has a positive effect on gold prices. Conversely excessive production capacities would lead to a downward movement in gold prices as the supply goes up.

Macro-economic factors: A weakening dollar, high inflation, the massive US trade deficits all act in favor of gold prices. The global trend of rising interest rates also had a positive impact on gold prices. Gold being regarded as a physical asset would lose its luster in a deflationary environment as gold is used effectively as an inflation hedge.

Geo-political issues: Any uncertainty on the political front or any war-like situation always acts as a booster to gold prices. The prices start building up war premiums and hence such movements. Stable situations would typically mean stable gold prices.

Seasonal demand: Since the demand for Gold in India is closely tied to the production of jewellery pieces tend to increase during the times of year when the demand for jewellery is the greatest, the demand for metals tends to be strong a few months ahead of these festive seasons, especially Dussera, Diwali, Akshaya Trithya festival and summer wedding season in in India. Christmas, Mother's Day, Valentine's Day, are also major festive and shopping for Gold.

Other factors affecting prices of gold are as follows:

• Global gold supplies and demand, which is influenced by factors such as forward selling by gold producers, purchases made by gold producers to unwind gold hedge positions, central bank purchases and sales, and productions and cost levels in major gold producing countries such as the South Africa, the United States and Australia.

- Investors' expectations with respect to the rate of inflation.
- Currency exchange rates.
- · Interest Rates
- Investment and trading activities of hedge funds and commodity funds Global or regional political, economic or financial
 events and situations
- In addition, investors should be aware that there is no assurance that gold will maintain its long-term value in terms of
 purchasing power in the future. In the event that the price of gold declines, the value of investment in units is expected to
 decline proportionately.
- Changes in indirect taxes like custom duties for import, sales tax, VAT or any other levies will have an impact on the valuation of gold and consequently the NAV of the scheme.
- Although, the objective of the Fund is to seek to provide returns that closely correspond to returns provided by price of gold
 through investment in physical Gold and Gold related securities, the performance of the scheme may differ from that of
 the domestic prices of Gold due to expenses and or other related factors

The other Scheme specific risk factors are summarized as follows

- Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading
 volumes, settlement risk, including the possible loss of principal and there is no assurance or guarantee that the objectives
 of the Scheme will be achieved.
- As the price/value/interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- Baroda BNP Paribas Gold ETF Fund of Fund is the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor/associates are not responsible or liable for any loss resulting from the operation of the scheme beyond the
 initial contribution of Rs. 10,00,000/- (Rupees Ten lakhs only) to the corpus of the Mutual Fund made by it towards setting
 up the Fund.
- The present scheme is not a guaranteed or assured return scheme.
- The liquidity of the Scheme's investments could at times, be restricted by trading volumes and settlement periods, the time taken by the Fund for redemption of units may be significant in the event of an inordinately large number of redemption requests or of a restructuring of the Scheme's portfolio. In view of this the Trustee has the right, at their sole discretion to limit redemption.
- From time to time and subject to the SEBI Regulations, the Sponsor, their associates, subsidiaries, the Mutual Fund and the AMC may invest directly or indirectly in the Scheme. These entities may acquire a substantial portion of the Scheme's Units and collectively constitute a major Investor in the Scheme. Accordingly, Redemption of Units held by such entities may have an adverse impact on the Scheme because the timing of such Redemption may impact the ability of other Unit holders to Redeem their Units. Investment decisions made by the AMC may not always be profitable.

Loss or Damage: The gold held by the Custodian of Baroda BNP Paribas Gold ETF may be subject to loss, damage, theft or restriction of access due to natural event or human actions. The Trustees may not have adequate sources of recovery if its gold is lost, damaged, stolen or destroyed and recovery may be limited, even in the event of fraud, to the market value of gold at the time the fraud is discovered. The custodian will maintain adequate insurance for its bullion and custody business. The liability of the Custodian is limited under the agreement between the AMC and the Custodian which establish the Mutual Fund's custody arrangements, or the custody agreements.

Market Trading Risks: Although the units of Baroda BNP Paribas Gold ETF are listed on the National Stock Exchange of India Limited, there can be no assurance that an active secondary market will develop or be maintained.

Lack of Market Liquidity: Trading in Baroda BNP Paribas Gold ETF on the Exchange may be halted because of market conditions or for reasons that in the view of the market authorities or SEBI, trading in Baroda BNP Paribas Gold ETF is not advisable. In addition, trading in Baroda BNP Paribas Gold ETF is subject to trading halts caused by extraordinary market volatility and pursuant to Stock Exchange(s) and SEBI "circuit filter" rules. There can be no assurance that the requirements of the market necessary to maintain the listing of Baroda BNP Paribas Gold ETF will continue to be met or will remain unchanged. Baroda BNP Paribas Gold ETF may suffer liquidity risk from domestic as well as international market.

Time lag in procurement/redemption of physical gold: Procurement of gold bars may take upto 1 month in case of adverse shortage of gold bars. It may not be possible to sell gold bar intentionally and may delay redemption depending on the market conditions.

Baroda BNP Paribas Gold ETF may trade at prices other than NAV: Baroda BNP Paribas Gold ETF may trade above or below its NAV. The NAV of Baroda BNP Paribas Gold ETF will fluctuate with changes in the market value of Scheme's holdings. The trading prices of Baroda BNP Paribas Gold ETF will fluctuate in accordance with changes in their NAVs as well as market supply and demand of Baroda BNP Paribas Gold ETF. However, given that Baroda BNP Paribas Gold ETF can be created and redeemed only in "Creation Units" directly with the fund, it is expected that large discounts or premiums to the NAVs of Baroda BNP Paribas Gold ETF may not sustain due to arbitrage possibility available.

Operational Risks: Gold ETFs are relatively new product, and their value could decrease if unanticipated operational or trading problems arise.

Regulatory Risk: Any changes in trading regulations by the Exchange or SEBI may affect the ability of Authorised Participant to arbitrage resulting into wider premium/discount to NAV. Although Baroda BNP Paribas Gold ETF are listed on Exchange, the AMC and the Trustees will not be liable for delay in listing of Units of the Scheme on Exchange/or due to connectivity problems with the depositories due to the occurrence of any event beyond their control.

Political Risks: Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved removal of trade barriers and protectionist measures, which could adversely affect the value of investments. It is possible that the future changes in the Indian political situation, including political, social or economic instability, diplomatic developments and changes in laws and regulations could have an effect on the value of investments. Expropriation, confiscatory taxation or other relevant developments could affect the value of investments.

Competition Risks: An investment in Baroda BNP Paribas Gold ETF may be adversely affected by competition from other methods of investing in gold. The value of the units relates directly to the value of the gold held by the scheme and fluctuations in the price of gold could adversely affect investment value of the units. The Baroda BNP Paribas Gold ETF is designed to mirror as closely as possible the performance of the price of gold bullion and the value of units directly relate to the value of the Gold held by the Scheme less the Scheme's liabilities (including accrued but unpaid expenses).

Credit & Interest Rate Risk: The Fund may also invest in Gold Related Instruments, money market instruments, bonds, securitised debts & other debt securities as permitted under the Regulations which are subject to price, credit and interest rate risk. Trading volumes and settlement periods and transfer procedures may restrict liquidity in debt investments.

Redemption Risk: The Unit Holders may note that even though Baroda BNP Paribas Gold ETF is an open-ended scheme, it would ordinarily repurchase Units in Creation Unit size. Thus unit holdings less than the Creation Unit size can normally only be sold through the secondary market, unless certain liquidity conditions are not met. Further, the price received upon the redemption of Baroda BNP Paribas Gold ETF units may be less than the value of the gold represented by them. The result obtained by subtracting the Fund's expenses and liabilities on any day from the price of the gold owned by the fund on that day is the net asset value of the fund which, when divided by the number of units outstanding on that date, results in the net asset value per unit, or NAV.

Passive Investments: As Baroda BNP Paribas Gold ETF is not actively managed, the underlying investments may be affected by a general decline in the domestic price of gold and other instruments invested under the plan. Baroda BNP Paribas Gold ETF invests in the Gold & securities mentioned in the asset allocation regardless of their investment merit. The AMC does not attempt to take defensive positions in declining markets. Further, the fund manager does not make any judgment about the investment merit nor shall attempt to apply any economic, financial or market analysis.

Management Risk: The ETF is subject to the risk that investment strategy may not produce the intended results.

Settlement Risk: In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the ETF to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the ETF portfolio may result, at times, in potential losses to the Scheme, and there can be a subsequent decline in the value of the securities held in the ETF.

Risks associated with investing in fixed income securities:

• Credit and Counterparty risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts.

The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security value.

Liquidity Risk: The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in
which the scheme invests.

A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimize impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic/corporate event.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all the investments and may affect the liquidity of the investments of the scheme.

The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

- Interest Rate Risk & Re-investment Risk: The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. The value of debt and fixed income securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa. Securities of any issuer that has higher duration could be riskier in terms of price movements relative to those with lower duration. Thus, any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security. The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- Sovereign risk: The Central Government of India is the issuer of the local currency debt in India. The Government raises
 money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and
 principal amount has a sovereign status implying least probability of a default, such securities are known as securities
 with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on nongovernment securities with "AAA" rating and hence yields on government securities are even lower than yields on nongovernment securities with "AAA" rating.
- Concentration Risk: The Scheme may pursue only a limited degree of diversification. It may invest in a limited number
 of securities or invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by
 regulation) or be concentrated on a few market sectors as compared to a diversified scheme. The scheme is also expected
 to have higher market liquidity risk on account of concentration. This could have implications on the performance of the
 scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable
 fluctuation in the Net Asset Value of the scheme.

Risks associated with investments in mutual fund units

To the extent of the investments made by the scheme in mutual funds units, the risks associated with investing in such funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

Risk factors associated with investment in Tri-Party Repo:

The mutual fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus, reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus, the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

Other Risks:

- Risk associated with inflation: Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
- Legal risk: The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.
- Taxation risk: The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such, no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this Scheme Information Document (SID) is as available under the prevailing taxation laws. This could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the scheme will endure indefinitely.
- Valuation risk: This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.
- Operational Risk: Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the Scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme.
- Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism: The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment/redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

C. Risk control measures

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The investors should note that these risks cannot be diffused. However, as part of our due diligence, we have chosen funds, which have long term performance track record, stability of fund management team.

For investments in fixed income instruments, a credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the tri-party repo on Government Securities or treasury bills/repo market, units of mutual fund which seeks to ensure liquidity in the scheme under normal circumstances. There can however be no guarantee against liquidity risk within the scheme.

The AMC may also implement certain internal control procedures/risk & exposure limits etc. for controlling risks which may be varied from time to time.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in Scheme.
