	The scheme shall rebalance the portfolio in case of any deviation to the asset allocation for a short term period on defensive considerations as per Para 1.14.1.2 (b) of SEBI Master circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90dated June 27, 2024. Such rebalancing shall be done within 30 days from the date of occurrence of deviation. In the event of the scheme not being rebalanced within the aforesaid period, justification for the same shall be placed before Investment Committee of the AMC and reasons for the same shall be recorded in writing. Investment Committee shall then decide on the course of action and may suggest rebalancing of the portfolio. However, at all times the AMC shall ensure that the portfolio would adhere to the overall investment objective of the scheme.
	In accordance with para 2.9 of SEBI Master circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90dated June 27, 2024, as amended from time to time, the scheme shall rebalance the portfolio in case of any deviation to the asset allocation as mentioned in the Scheme Information Document (SID) due to passive breaches. Such rebalancing shall be done within 30 days from the date of occurrence of deviation. In the event of the scheme not being rebalanced within the aforesaid period, justification for the same shall be placed before Investment Committee of the AMC and reasons for the same shall be recorded in writing. Investment Committee shall then decide on the course of action and may suggest rebalancing of the portfolio. However, at all times the AMC shall ensure that the portfolio would adhere to the overall investment objective of the scheme.
	In case the portfolio of scheme is not rebalanced within the above mandated timelines, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before Investment Committee. The Investment Committee, if so desires, can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period.
	In case the portfolio of scheme is not rebalanced within the aforementioned mandated plus extended timelines, AMCs shall: i. not be permitted to launch any new scheme till the time the portfolio is rebalanced. ii. not to levy exit load, if any, on the investors exiting such scheme(s).
Investment	The investment strategy of the Scheme is as follows :
Strategy	The Scheme has a dual objective of generating capital appreciation by investing in equity and equity related securities as well as generating income by investing in debt and money market securities, while attempting to manage risk from the market through active asset allocation. In order to achieve this process, the Scheme will follow a top down and bottom-up strategy. The top-down process will lead to the active ongoing asset allocation decision between equity and debt and the bottom up process would lead to construction of the portfolio using specific securities.
	The AMC has built a proprietary model for asset allocation based on the valuations and fundamentals of the companies. The valuation parameters chosen for the asset allocation are PE, P/BV, Dividend yield and the difference of earnings yield and 10 year Government Bond. The rationale behind choosing multiple valuation parameters instead of only PE, is to incorporate the status of the three important financial statements, the P&L, balance sheet and cash flow statement. Different weights have been assigned to different valuation parameters with more emphasis on the balance sheet and cash flow related parameters. The model will be revisited if needed, and adjustments made if needed, to ensure that the outcomes remain relevant to the market environment.
	Assumptions of the proprietary model
	<ul> <li>BSE 200 Index was chosen for the calculation of equity returns and for comparing the portfolio returns.</li> <li>10 year G-sec was chosen for the calculation of debt returns.</li> <li>Valuation parameters were chosen on the trailing 12 months basis.</li> <li>The model would be run on monthly basis to decide the asset allocation. Generally, once the allocation is fixed, it will not be changed till the next month except in case of extraordinary situations where extreme volatility in the markets would force a change in asset allocation.</li> </ul>
	Equity allocation based on the model

The gross equity exposure will be maintained in the range of 65% to 100% while the net equity exposure will be maintained between 30% to 100%. The difference between gross and net variation would generally be invested in arbitrage or in arbitrage equity mutual funds. The model would follow the matrix approach for asset allocation based on different parameters.

### Fixed Income allocation based on the model

The exposure to Debt & Money Market Instruments including cash and cash equivalents will be maintained in the range of 0% to 35%. The model would follow the matrix approach for asset allocation based on different parameters. Once the asset allocation has been decided based on the model, the portfolio would be constructed based on top-down as well as bottom-up approach using our core principle of investing, GARP (Growth at a Reasonable Price). The Scheme retains the flexibility to deviate from the asset allocation model, depending on the market conditions, market opportunities, applicable regulations and political and economic factors.

scheme	Scheme specific risk factors are summarize	d as follows:				
	<ul> <li>Market Risk: All mutual funds and securities investments are subject to market risk and there can be assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invest in would be exposed to price changes on a day-to-day basis. These price changes may occur due instrument-specific factors as well as general macroeconomic conditions.</li> <li>Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, mark or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.</li> <li>Different parts of the market can react differently to these developments. The value of an individu security or particular type of security can be more volatile than the market as a whole and can perfor differently from the value of the market as a whole.</li> <li>Concentration Risk:</li> <li>The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of asset in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a fer market sectors. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in t Net Asset Value of the scheme.</li> </ul>					
	<b>Risks associated with investing in equity and equity related instruments:</b> The risks associated with investments in equities and similar instruments include significant fluctual prices. The impact of fluctuations is likely to be accentuated for short-term investments. The risk t performance of one or more companies declines or stagnates may have a negative impact performance of the Scheme as a whole at any given time. Stock markets are volatile and can decline significantly in response to political, regulatory, ecomarket and stock-specific developments etc.					
	The Scheme may hold such securities for only a very short time, which could tend to increase the c The Scheme may invest in growth stocks which may be more volatile than the market in general and react differently to economic, political and market developments and to specific information about issuer.					
	Risks associated with investing in fixed inco	me securities:				

Credit and Counterparty risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations). Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts. The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security value. 2. Liguidity Risk: The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests. A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme. The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security. 3. Interest Rate Risk & Re-investment Risk: The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. The value of debt and fixed income securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa. Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security. The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. 4. Sovereign risk: The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating. Risk Factors associated with Investments in Derivatives Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. Some of the risks inherent to derivatives investments include: 1. Price Risk: Despite the risk mitigation provided by various derivative instruments, there remains an

inherent price risk which may result in losses exceeding actual underlying.

2. **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.

3. **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.

4. Limitations on upside: Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.

5. **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

### Risks associated with Securities Lending

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in a possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

### Risk factors specific to investments in foreign securities:

The Scheme may invest in Foreign Securities including overseas debt / equities / ADRs / GDRs with the approval of RBI/SEBI, subject to such guidelines as may be issued by RBI/SEBI. The net assets, distributions and income of the Scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. The Scheme's NAV may also be affected by a fluctuation in the general and specific level of interest rates internationally, or the change in the credit profiles of the issuers. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the scheme investments.

The Scheme may, where necessary, appoint advisor(s) for providing advisory services for such investments. The appointment of such advisor(s) shall be in accordance with the applicable requirements of SEBI. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, transaction costs and overseas regulatory costs, the fees of appointed advisor(s). The fees related to these services would be borne by the AMC and would not be charged to the Scheme.

### Risk factors associated with investments in REITs and InvITs

Investments in REITs/InvITs carry liquidity risk, price risk/market risk, interest rate risk, reinvestment risk, credit risk, regulatory/legal of lower than expected distributions.

### Risk factors associated with investments in Credit Default Swaps:

Credit default swap is the most common form of credit derivative where the buyer of the swap makes payments to the swap's seller until the maturity date of a contract. In return, the seller agrees that – in the event that the debt issuer defaults or experiences another credit event – the seller will pay the buyer the security's value as well as all interest payments that would have been paid between that time and the security's maturity date. The Scheme may participate in credit Default Swaps (CDS) as a buyer (protection buyer) to hedge/offset credit risk related to fixed income instruments. It is important to note that the credit risk isn't completely eliminated – it has been shifted to the CDS seller. The risk is that the CDS seller defaults at the same time the credit event occurs. In case the debt issuer does not default or no credit

event occurs till maturity of CDS contract, the buyer will end up losing money through the payments on the CDS.

### Risks for writing covered call options for equity shares:

- 1. Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. Being a covered call, the downside risk is not unlimited, but limited to the extent of change in the price of underlying security held by the Fund.
- 2. The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.
- 3. The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.
- 4. The total gross exposure related to option premium paid and received shall not exceed the regulatory limits of the net assets of the scheme.

### Risks associated with segregated portfolio:

- Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- Security comprises of segregated portfolio may not realise any value.
- Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
- Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.

### Risk Factors associated with investing in debt instrument securities with special features:

Pursuant to para 12.2.1 of SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90dated June 27, 2024, the schemes may invest in securities having special features viz. subordination to equity (absorbs losses before equity capital) and /or convertible to equity upon trigger of a pre-specified event for loss absorption. Such special features may be available under the Additional Tier I bonds and Tier 2 bonds issued under Basel III framework.

These securities having special features will carry and be subject to all the risks associated with the investment in Fixed Income securities like Credit and Counterparty Risk, Liquidity Risk, Interest Rate Risk etc. However investors are requested to note that as these securities are subordinate to all other

Fixed Income securities issued by an issuer and only senior to common equity, such securities with special features are more risker than other Fixed Income Securities of the same issuer.

**Credit Risk** : Where the payout of interest or principal amount is due to be paid by an issuer for senior debt securities and for securities with such special features, such payout for the securities with special features would normally happen only after paying off all the senior debt dues. This increases the risk that the Issuer of the securities with special features may default on interest and /or principal payment obligations and/or default upon violation of covenant(s) and/or delay in scheduled payment(s)

**Liquidity Risk** : The securities with special features can normally be considered to have limited secondary market liquidity as compared to any senior debt of the issuer, and thus fund manager may be forced to hold

	such securities with special features till its maturity. Further, where the special features results in trigger and conversion to equity securities, such equity security received by the scheme(s) upon conversion will carry and be subject to all the risks associated with the investment in equity securities.
	Risk Factors associated with investments in debt instruments having Structured Obligations / Credit
	<u>Enhancements:</u> The risks factors stated for debt instruments having Structured Obligations / Credit Enhancements are in addition to the risk factors associated with fixed income instruments:
	<ul> <li>Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer</li> <li>SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead</li> </ul>
	<ul> <li>to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.</li> <li>The credit risk of debt instruments which are CE rated derives rating is based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.</li> </ul>
	In addition to above and to the extent of the corpus of the Scheme investments in certain securities, the Scheme shall be subject to various risk factors including, but not limited to, risks associated with: investments in securitised debt and investments in liquid funds. The Scheme shall also be subject to other risks including risk associated with inflation, legal risk, taxation risk, valuation risk, operational risk & risk factors associated with processing of transaction, in case of investors investing in mutual fund units, through Stock Exchange Mechanism as provided in SID. Different types of securities in which the Scheme would invest as given in the Scheme Information Document/Key Information Memorandum carry different levels and types of risk. The above are some of the common risks associated with investments in various securities. Investors may, if they wish, consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming Units, i.e. before making a decision to invest/redeem Units. <b>Investors in the Scheme are not being offered any guaranteed returns.</b>
Plans &	Please refer to SID for more details on risk factors and risk mitigation measures. The Scheme have two Plans : Regular and Direct.
Options	Direct Plan is meant for direct investments, i.e. for investors who purchase/subscribe to the units of the Scheme directly with the Fund and is not available for investors who route their investments through a Distributor, while the Regular Plan is meant for investors who route their investments through distributors only.
	Both Plans have a common portfolio but the Direct Plan has a lower expense ratio on account of absence of brokerage and commission. Hence, both Plans have distinct NAVs.
	Each of the Plans have the following options: A. Growth Option (default option in case no option specified by investor);

	B. IDCW Option					
	a. Payout of IDCW Option;					
	b. Reinvestment of IDCW Option(default sub-option in case no sub-option specified by investor)					
	If the Dividend under the Payout Option is less than or equal to Rs. 200, it will, by default, be reinvested under the Reinvestment sub-option.					
	<b>Default Option/Facility:</b> If an investor does not clearly specify choice of option at the time of investing, it will be Growth Option. Likewise, if the investor does not clearly specify choice of sub-option viz. Pay					
	Re-investment of IDCW, then Re-investment of IDCW option will be consid	ered as default.				
	For detailed disclosure on default plans and options, kindly refer SAI.	1
