| Investment Strategy | <p>The net assets of the Scheme will be invested in debt and money market instruments. The Debt portion of the portfolio will be actively managed based on the AMC's view on interest rates. The price of fixed income instruments varies with changes in interest rates. As interest rates decline, the value of fixed income securities rise and as interest rates rise, their value declines. The AMC forms views on the likely direction of interest rates and the portfolio is structured consistent with these views.</p> <p>Individual instruments are bought and sold based on the conformity with the interest rate view and the instrument specific factors (credit risk, exposure). By actively managing the portfolio, the scheme attempts to achieve its objective through both interest yield and capital appreciation. As such, the scheme may not invest solely based on the best available yields in the market at all points of time.</p> <p>Some portion of the scheme's assets will be invested in equity and equity related securities to fulfil the secondary objective of the scheme.</p>   |  |  |

|                            |  |
|----------------------------|--|
|                            | <p>The equity portion of the portfolio will aim to outperform the benchmark and to provide long-term capital growth through a diversified and actively managed portfolio of equity and equity related securities. The scheme will invest in a range of companies, with a bias towards large and medium market capitalization companies.</p>  |
| Risk Profile of the scheme | <p>Mutual Fund units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.</p> <p><b>Scheme Specific Risk Factors are summarized as follows</b></p> <p><b>Market Risk:</b> All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity. Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.</p> <p><b>Risks associated with Investing in equities:</b></p> <p>The risks associated with investments in equities and similar instruments include significant fluctuations in prices. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time.</p> <p>Stock markets are volatile and can decline significantly in response to political, regulatory, economic, market and stock-specific developments etc.</p> <p>The Scheme may hold such securities for only a very short time, which could tend to increase the costs. The Scheme may invest in growth stocks which may be more volatile than the market in general and may react differently to economic, political and market developments and to specific information about the issuer.</p> <p><b>Concentration Risk:</b></p> <p>The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme.</p> <p><b>Risks associated with Investing in fixed income securities:</b></p> <ul style="list-style-type: none"> <li>- <b>Credit and Counterparty risk:</b></li> </ul> <p>Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).</p> <p>Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts. The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default. If the credit rating of an issue, issuer or counterparty is downgraded this may cause the value of the related debt securities in which the scheme has invested to fall. This Scheme might hold large or all amount of its assets to securities with credit rating BBB, or lower in case of downgrading. This could present a much higher than average risk.</p> <p>The severity of the risk varies depending on the quality of the securities in the scheme. To the extent that the scheme invests in high-yield bonds, this presents a higher than average risk. There are different types of debentures available in the market. Some of them could be more risky. Lower-quality debt securities and certain types of securities involve greater risk of default or price changes due to changes in the credit quality of</p> |

the issuer. They are not in the first rank of debts in case of default. The value of lower-quality debt securities and certain types of other securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market or economic developments.

- **Liquidity Risk:**

The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests.

A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic /corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme.

The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

- **Interest Rate Risk & Re-investment Risk:**

The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. The value of debt and fixed income securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa. Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security. The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.

- **Sovereign risk:**

The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

- **Risk associated with investment in unrated instruments:**

The scheme may invest in lower rated/unrated instruments considering the overall risk of the portfolio. This may increase the absolute level of risk of the portfolio. The credit risk & liquidity risk will be relatively higher for lower/unrated instruments as compared to the instruments that have been assigned investment grade ratings. Lower rated/ unrated securities also tend to be more sensitive to economic conditions than instruments that have been assigned investment grade ratings.

- **Risks associated with Securities Lending:**

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in a possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent

securities and this can lead to temporary illiquidity.

**Risks associated with investing in securitised debt:**

The scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitized debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk. For further details, please refer Scheme Information Document.

**Risks associated with investing in liquid funds:**

To the extent of the investments in liquid mutual funds, the risks associated with investing in liquid funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

**Risk associated with investments in derivatives (including Imperfect Hedging with Investments in Interest Rate Futures (IRFs)):**

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable.

Some of the risks inherent to derivatives investments include:

- **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
- **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
- **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
- **Limitations on upside:** Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
- **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

**Risk factors associated with investments in Credit Default Swaps:**

Credit default swap is the most common form of credit derivative where the buyer of the swap makes payments to the swap's seller until the maturity date of a contract. In return, the seller agrees that – in the event that the debt issuer defaults or experiences another credit event – the seller will pay the buyer the security's value as well as all interest payments that would have been paid between that time and the security's maturity date. The Scheme may participate in credit Default Swaps (CDS) as a buyer (protection buyer) to hedge/offset credit risk related to fixed income instruments. It is important to note that the credit risk isn't completely eliminated – it has been shifted to the CDS seller. The risk is that the CDS seller defaults at the same time the credit event occurs. In case the debt issuer does not default or no credit event occurs till maturity of CDS contract, the buyer will end up losing money through the payments on the CDS.

**Risk factors associated with investments in REITs and InvITs:**

Investments in REITs/InvITs carry liquidity risk, price risk/market risk, interest rate risk, reinvestment risk, credit risk, regulatory/legal of lower than expected distributions.

**Risk factors specific to Investments in foreign securities:**

The Scheme may invest in Foreign Securities including overseas debt / equities / ADRs / GDRs with the approval of RBI/SEBI, subject to such guidelines as may be issued by RBI/SEBI. The net assets, distributions and income of the Scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. The Scheme's NAV may also be affected by a fluctuation in the general and specific level of interest rates internationally, or the change in the credit profiles of the issuers. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the scheme investments.

The Scheme may, where necessary, appoint advisor(s) for providing advisory services for such investments. The appointment of such advisor(s) shall be in accordance with the applicable requirements of SEBI. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, transaction costs and overseas regulatory costs, the fees of appointed advisor(s). The fees related to these services would be borne by the AMC and would not be charged to the Scheme.

**Risks associated with segregated portfolio:**

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
2. Security comprises of segregated portfolio may not realise any value.
3. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
4. Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.

**Risk Factors associated with investing in debt instrument securities with special features:**

Pursuant to para 12.2.1 of SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024, the schemes may invest in securities having special features viz. subordination to equity (absorbs losses before equity capital) and /or convertible to equity upon trigger of a pre-specified event for loss absorption. Such special features may be available under the Additional Tier I bonds and Tier 2 bonds issued under Basel III framework.

These securities having special features will carry and be subject to all the risks associated with the investment in Fixed Income securities like Credit and Counterparty Risk, Liquidity Risk, Interest Rate Risk etc. However investors are requested to note that as these securities are subordinate to all other Fixed Income securities issued by an issuer and only senior to common equity, such securities with special features are more riskier than other Fixed Income Securities of the same issuer.

**Credit Risk:** Where the payout of interest or principal amount is due to be paid by an issuer for senior debt securities and for securities with such special features, such payout for the securities with special features would normally happen only after paying off all the senior debt dues. This increases the risk that the Issuer of the securities with special features may default on interest and /or principal payment obligations and/or default upon violation of covenant(s) and/or delay in scheduled payment(s).

**Liquidity Risk:** The securities with special features can normally be considered to have limited secondary market liquidity as compared to any senior debt of the issuer, and thus fund manager may be forced to hold such securities with special features till its maturity. Further, where the special features results in trigger and conversion to equity securities, such equity security received by the scheme(s) upon

The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer</li> <li>• SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold</li> <li>• The credit risk of debt instruments which are CE rated derives rating is based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.</li> </ul> <p><b>Risk factors associated with Investments in repo transactions in corporate debt:</b></p> <p>The Scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo transactions, the collateral may be sold, and a loss is realized only if the sale price is less than the repo amount. The risk is further mitigated through over-collateralization (the value of the collateral being more than the repo amount).</p> <p><b>Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF):</b></p> <p>Investors are requested to read details disclosure on investment of the schemes in the CDMDF as listed in sub-section C.
