Portfolio Rebalancing:

Portfolio rebalancing in case of deviation from asset allocation under Defensive consideration:

The scheme shall ensure adherence to the above asset allocation under normal circumstances. However, due to market conditions, the AMC may invest beyond the range set out in the asset allocation. Such deviations shall normally be for a short term and defensive considerations as per Para 1.14.1.2 (b) of SEBI Master circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024, and the fund manager will rebalance the portfolio within 30 calendar days from the date of deviation. However, at all times the AMC shall ensure that the portfolio would adhere to the overall investment objective of the scheme.

Portfolio Rebalancing in case of passive deviation from asset allocation:

In accordance with para 2.9 of SEBI Master circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024, as amended from time to time, the scheme shall rebalance the portfolio in case of any deviation to the asset allocation mentioned in the Scheme Information Document (SID) due to passive breaches. In the event of deviation from mandated asset allocation mentioned in the Scheme Information Document (SID) due to passive breaches (occurrence of instances not arising out of omission and commission of AMCs), the portfolio shall be rebalanced within a period of thirty (30) business days.

In case the portfolio of scheme is not rebalanced within the above mandated timelines, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before Investment Committee. The Investment Committee, if so desires, can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period.

In case the portfolio of scheme is not rebalanced within the aforementioned mandated plus extended timelines, AMCs shall:

- not be permitted to launch any new scheme till the time the portfolio is rebalanced.

	The Investment Committee may extend the deployment timeline by up to 30 business days and will provide recommendations to ensure timely deployment in the future. In case the funds are not deployed as per the asset allocation mentioned in the SID as per the aforesaid mandated plus extended timelines, AMC shall: - not be permitted to receive fresh flows in the Scheme till the time the funds are deployed as per the asset allocation mentioned in the SID; - not be permitted to levy exit load, if any, on the investors exiting the Scheme after 60 business days of not complying with the asset allocation of the scheme; - inform all investors of the NFO, about the exit option without exit load, via email, SMS or other similar mode of communication; - report deviation, if any, to Trustees at each of the above stages.
Investment Strategy	The Scheme will invest 80% of its net assets in companies that are part of business conglomerates in India. The Scheme may invest upto 20% of its net assets in companies other than those that are part of the theme of the fund. The Scheme may also invest a small portion of its corpus in debt, money market instruments and REITs and InVITs to manage its liquidity requirements. The Scheme will have a diversified portfolio focusing on investments in companies from leading diversified conglomerates. Conglomerates will be identified as groups based in India, led or controlled by promoters, and comprising at least two listed companies in different sectors or industries. The scheme would follow the definition of a group, as defined in clause (b) of the Explanation to Section 5 of the Competition Act, 2002, which includes an entity, its subsidiaries, fellow subsidiaries, holding company, and associates. The Scheme may invest in any listed companies within the identified conglomerates. It will invest in at least four groups, with exposure limited to 25% of the net assets per group. The Scheme may also invest in the listed holding companies where the primary source of revenues is the dividend from the subsidiaries and associates. The scheme would also invest in opportunities provided by companies incubating other businesses with significant net worth in both listed and unlisted spaces - a model increasingly adopted by large companies to set up new businesses or enter new industries and sectors. The following are the broad parameters/factors that shall be considered while building the portfolio of companies. - business and economic fundamentals driven by in-depth research - Reputation of the management and track record - long term growth prospects - The financial strength of the companies, as indicated by well recognised financial parameters employing strong stock selection valuation parameters - any other factor affecting a company's business prospects We may, from time to time, review and modify the Scheme's investment strategy if such changes are considered to be in the best interests of the unitholders and if market conditions warrant it. Portfolio turnover Portfolio turnover is defined as lesser of purchases and sales as a percentage of the average corpus of the Scheme during a specified period of time. Portfolio turnover would depend upon the market conditions such as volatility of the market and inflows/outflows in the scheme. The Scheme is an open-ended Scheme with subscriptions and redemptions expected on a daily basis. Hence, it will be difficult to estimate the portfolio turnover with any reasonable amount of accuracy. Trading In Derivatives The Scheme intend to use derivatives for the purposes, which may be permitted by SEBI Mutual Fund Regulations from time to time, which will include hedging & portfolio balancing. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment. SEBI has vide its Circular SEBI/MFD/CIR No.03/158/03 dated June 10, 2003, specified the guidelines pertaining to trading by Mutual Fund in Exchange Traded Derivatives. The following information provides a basic idea as to the nature of the derivative instruments proposed to be used by the scheme and the benefits and risks attached therewith. For detailed derivative strategies, please refer to SAI.
Risk Profile of the Scheme	The Scheme specific risk factors are summarized as follows: Investment in the Scheme carries the risk regarding non-diversification of the portfolio due to the investment universe mainly limited to companies which are part of business conglomerates and hence, the scope for diversification could be limited at times and the concentration is expected to be high in such companies. Investors may note that AMC/Fund Manager's investment decisions may not be always profitable. Although it is intended to generate capital appreciation and maximize the returns by actively investing in equity/ equity related securities and utilising debt and money market instruments as a defensive investment strategy. At times, churning of portfolios may lead to substantial losses due to subsequent adverse developments in the capital markets or unfavourable market movements. In view of the same, there can be no assurance that the investment objective of the Scheme will be realised. The other Scheme specific risk factors are summarized as follows: Market Risk: The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Risks associated with investing in equity and equity related instruments:

Investments in equity and equity related instruments are volatile and prone to price fluctuations on a daily basis. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time. Investments in equity and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.

Risks associated with investing in fixed income securities:

1. **Credit and Counterparty risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).
Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts.
2. **Liquidity Risk:** The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests.
A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets.
3. **Interest Rate Risk & Re-investment Risk:** Interest rates may be influenced by several elements or events, such as monetary policy, discount rate, inflation, etc. Any impact of interest rate changes would be higher on securities with higher duration. Reinvestment risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
4. **Sovereign risk:** The credit risk on Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.
5. **Concentration Risk:**
The Scheme may pursue only a limited degree of diversification. It may invest in a limited number of securities or invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors as compared to a diversified scheme. The scheme is also expected to have higher market liquidity risk on account of concentration.

Risk Factors associated with Investments in Derivatives:

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable.

Some of the risks inherent to derivatives investments include:

1. **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
2. **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
3. **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g., mismatch between the maturity date of the futures and the actual selling date of the asset.
4. **Limitations on upside:** Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
5. **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.
6. **Execution Risk:** The prices which are seen on the screen need not be the same at which execution will take place.

Risk factors specific to investments in foreign securities:

The net assets, distributions and income of the Scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation.

Risks associated with Securities Lending

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e., the Scheme and the approved intermediary. Such failure to comply can result in a possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities, and this can lead to temporary illiquidity.

Risks associated with investing in mutual fund units:

To the extent of the investments in units of mutual funds, the risks associated with investing in such funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

Risk associated with investment in ETF:

- ETFs are typically designed to track the performance of certain indices, market sectors or groups of assets such as stocks, bonds or commodities. ETF managers may use different strategies to achieve this goal but in general they do not have the discretion to take defensive positions in declining markets. Investors must be prepared to bear the risk of loss and volatility associated with the underlying index/assets.

- Investments in the securities constituting the Index/commodities are subject to price fluctuation on daily basis. The volatility in the value of those securities is due to various micro and macroeconomic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on the NAV of Scheme
- The units of the Scheme are to be listed on stock exchanges. However, there can be no assurance that an active secondary market will develop or be maintained.
- Listing and trading of the ETF is undertaken on the Stock Exchanges within the rules, regulation and policy of the Stock Exchange and Regulator. Any change in trading rules, regulation and policy by the regulatory authority would have a bearing on the trading of the units of the ETF and its prices.
- Trading in units of the Scheme on the exchange may be halted due to market conditions or for reasons that in view of the stock exchange or SEBI, trading in the units of the Scheme is not advisable. In addition, trading in units of the scheme is subject to trading halts caused by extraordinary market volatility and pursuant to BSE/NSE and SEBI circuit filter rules. There can be no assurance that the requirements of the market necessary to maintain the listing of units of the Scheme will continue to be met or will remain unchanged.
- Units of the scheme may trade above or below its NAV. The NAV of the scheme will fluctuate with changes in the market value of scheme's portfolio. The trading price of units of the Scheme will change in according with changes in its NAV as well as market supply and demand of units in the scheme. However, given the fact that units of the scheme can be created or redeemed in creation unit directly with the fund, large discounts or premiums to the NAV are not expected to sustain due to the arbitrage opportunity available.
- Any changes in trading regulations by the stock exchange/s or SEBI may affect the ability of the market maker to arbitrage resulting into wider premium/discount to NAV. Although the units are listed on the stock exchanges, the AMC and the Trustee will not be liable for delay in listing of Units of the scheme on the stock exchanges / or due to the connectivity problems with depositories and/or due to the occurrence of any event beyond their control.

Risk factors associated with investments in REITs and InvITs

Investments in REITs/InvITs carry liquidity risk, price risk/market risk, liquidity risk, interest rate risk, reinvestment risk, credit risk, regulatory/legal risk etc.

Risks associated with segregated portfolio:

- Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- Security part of segregated portfolio may not realise any value.
- Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market.
- Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted.

Risks associated with investing in securitised debt:

The Scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage-backed securities (MBS). As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

Other Risks of the Scheme many include Risk associated with Tri-Party Repo, Pass through Certificate (PTC), inflation, legal risk, Taxation risk, Valuation risk, Operational risk etc.

Risks for writing covered call options for equity shares:

- Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing are capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. Being a covered call, the downside risk is not unlimited, but limited to the extent of change in the price of underlying security held by the Fund.
- The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the Scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the Scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.
- The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received, the Scheme would be at a loss.
- The total gross exposure related to option premium paid and received shall not exceed the regulatory limits of the net assets of the scheme.

Writing Options

Benefits of writing an option with underlying stock holding (Covered call writing strategy)

The covered call strategy can be followed by the Fund Manager in order to hedge risk thereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits:

- Hedge against market risk** - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

	Risk control measures Investments made by the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. While allocating and choosing securities, the Investment Manager will aim to diversify by gaining broad exposure to different industries and companies in order to reduce risk. Please refer to the SID for detailed risk factors and risk control measures.
