Investment Strategy	To achieve the investment objective, the scheme will invest in equity and equity linked instruments across market capitalization viz. The list of stocks would be as per the list published by AMFI in accordance with the said circular and updated on half yearly basis.
	The Scheme will focus on creating an appropriate diversified portfolio of companies with a long term perspective. The Scheme will follow a top down approach to select sectors and follow a bottom up approach to pick stocks across the sectors based on the quality of business model and quality of management.
	Stock specific risk will be minimized by investing only in those companies that have been thoroughly analysed by the Investment team at the AMC. The following are the broad parameters/factors that shall be considered while building the portfolio of companies.
	a) business and economic fundamentals driven by in-depth research.
	b) Reputation of the management and track record.
	c) long term growth prospects.
	The financial strength of the companies, as indicated by well recognised financial parameters employing strong stock selection valuation parameters
Risk Profile of the scheme	Mutual Fund units involve investment risks including the possible loss of principal. Please read the Scheme Information Document (SID) carefully for details on risk factors before investment.
	Standard Risk Factors
	 Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
	2. As the price/ value/ interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the stock markets, bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the companies and issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
	3. Past performance of the Sponsor/ AMC/ Mutual Fund does not guarantee future performance of the scheme.
	4. Baroda BNP Paribas Flexi Cap Fund is the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
	 The sponsors / associates are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 10,00,000/- (Rupees ten lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
	6. The present scheme is not a guaranteed or assured return scheme.
	Scheme Specific Risk Factors are summarized as follows:
	Market Risk:
	All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.
	Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.
	Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.
	Risks associated with investing in equity and equity related instruments:
	Investments in equity and equity related instruments are volatile and prone to price fluctuations on a daily basis. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time. Investments in equity and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.
	Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

Risk Factors associated with Investments in Derivatives

The Scheme(s) may use various derivative instruments and techniques, permitted within SEBI (Mutual Funds) Regulations, 1996 from time to time including but not limited for portfolio balancing and hedging purpose, which may increase the volatility of Scheme's performance. Usage of derivatives will expose the Scheme(s) to certain risks inherent to such derivatives.

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is a possibility that a loss may be sustained by the Scheme(s) as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance.

In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence the derivative cannot be expected to perfectly hedge the risk of the underlying assets. This also increases the volatility of the Scheme's performance. Some of the risks inherent to derivatives investments include:

- **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
- Default Risk: This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
- **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
- Limitations on upside: Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
- Liquidity risk: This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of
 whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which
 may impact returns while exiting opportunities.

Risks for writing covered call options for equity shares:

- Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. Being a covered call, the downside risk is not unlimited, but limited to the extent of change in the price of underlying security held by the Fund.
- The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.
- The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.
- The total gross exposure related to option premium paid and received shall not exceed the regulatory limits of the net assets of the scheme.

Risks associated with Securities Lending:

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in a possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

Risks associated with segregated portfolio:

- Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- Security comprises of segregated portfolio may not realise any value.
- Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
- Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any
 halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in
 the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary
 market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements
 of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.

	In addition to above, and to the extent of the corpus of the Scheme investments in certain securities, the Scheme shall be subject to various risk factors including but not limited to risks associated with: investments in Fixed Income Securities such as Credit and Counterparty risk, Liquidity risk, Market risk, Interest Rate risk & Re-investment risk etc., investments in foreign
	securities, investments in mutual fund units, investments in REITs and InvITs etc, investments in securities debt etc. The Scheme shall also be subject to other risks including risk associated with inflation, legal risk, taxation risk, valuation risk, operational risk & risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism as provided in SID.
	Different types of securities in which the Scheme would invest as given in the Scheme Information Document/Key Information Memorandum carry different levels and types of risk. The above are some of the common risks associated with investments in various securities.
	Investors may, if they wish, consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming Units, i.e. before making a decision to invest/redeem Units.
	Investors in the Scheme are not being offered any guaranteed returns. Please refer to SID for detailed scheme specific risk factors.
Risk Control Measures	Investments made by the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. While allocating and choosing securities, the Investment Manager will aim to diversify by gaining broad exposure to different industries and companies in order to reduce risk.
	Risk Mitigation measures for investments in equity / equity related instruments
	• The Scheme aims to maintain a well-diversified equity portfolio comprising stocks across various sectors of the economy. This shall aid in managing concentration risk and sector specific risks.
	• The Scheme targets to maintain exposure across different market cap segments - i.e. large, mid-cap and small cap. This shall aid in managing volatility and also improve liquidity.
	• The Scheme's will strive to mitigate risk through a judicious mix of Debt and Money Market Instruments and equity/ equity related instruments.
	Risk Mitigation measures for investments in debt instruments
	The investments in debt and Money Market instruments would be undertaken after assessing the associated credit risk, interest rate risk and liquidity risk. The AMC shall undertake credit evaluation of each investment opportunity and invest in rated papers of companies having a sound background, strong fundamentals and quality of management and financial strength. In addition, the Scheme would endeavor to invest in instruments with a relatively higher liquidity, and will seek to manage the duration of the debt assets on proactive basis to manage interest rate risk and to optimize returns.
	The scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI/RBI for the purpose of hedging and portfolio rebalancing.
	The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in Scheme
Plans & Options	The Scheme offers following two plans:
	Baroda BNP Paribas Flexi Cap Fund - Regular Plan
	Baroda BNP Paribas Flexi Cap Fund - Direct Plan
	Each Plan offers Growth and Income Distribution cum Capital Withdrawal (IDCW) Option*.
	The IDCW Option offers Payout and Re-investment facilities. There shall be a single portfolio under the scheme.
	Direct Plan is meant for direct investments, i.e. for investors who purchase/subscribe to the units of the Scheme directly with the Fund and is not available for investors who route their investments through a Distributor, while Regular Plan is meant for investors who route their investments through distributors only.
	*Amounts under IDCW option can be distributed out of investors capital (equalization reserve), which is part of sale price that represents realized gains. However, investors are requested to note that amount of distribution under IDCW option is not guaranteed and subject to availability of distributable surplus.
	Growth Option: The Scheme will not declare any distribution under this option. The income attributable to units under this option will continue to remain invested in the option and will be reflected in the Net Asset Value of Units under this option.
	IDCW Option:
	Under IDCW Option, the amount of distribution, if any, shall be declared by Trustees from time to time. The NAV of the unit holders in any of the IDCW options will stand reduced by the amount so distributed and statutory levy, if any, under said IDCW option. The NAV of the Growth Option will remain unaffected.
	It may be noted that the amount of distribution, if any, under IDCW option will be subject to the availability of distributable surplus as computed in accordance with the SEBI Regulations and discretion of the Trustees/ AMC. There is no assurance or guarantee to unitholders as to the rate of distribution nor that the amounts shall be distributed regularly. The Trustee's/AMC's decision with regards to the rate, timing and frequency of distribution shall be final The AMC may announce a book closure period for the purpose of distribution of amounts under IDCW option. Amount of distribution, if declared, will be paid to the unit holders appearing in the register of unit holder on the Record Date. To the extent the entire net income and realised gains are not distributed, the same will remain invested in the option and will be reflected in the NAV.
	Unitholders opting for the IDCW Option may choose to reinvest the amounts to be received by them under IDCW option in additional Units of the said Option. The amount reinvested will be net of tax deducted at source, wherever applicable. The amounts so reinvested shall constitute a constructive payment of the income distribution cum capital withdrawal under IDCW option to the Unitholders and a constructive receipt of the same amount from each Unitholder for reinvestment in Units.
