I. INTRODUCTION
A. RISK FACTORS
Standard Risk Factors

- (i) Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
- (ii) As the price/ value/ interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the stock markets, bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the companies and issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
- (iii) Past performance of the Sponsor/ AMC/ Mutual Fund does not guarantee future performance of the scheme.
- (iv) BNP Paribas Substantial Equity Hybrid Fund is the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- (v) The sponsor / associates are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 1,00,000/- (Rupees One lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
- (vi) The present scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors
Market Risk:

All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

- **Risks associated with investing in equities:**

The risks associated with investments in equities and similar instruments include significant fluctuations in prices. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time.

Stock markets are volatile and can decline significantly in response to political, regulatory, economic, market and stock-specific developments etc. Different parts of the market can react differently to these developments. The stock-specific volatility may also change over a period of time as the characteristic of the stock undergoes a change in terms of market-cap category.

The Scheme may hold such securities for only a very short time, which could tend to increase the costs. The Scheme may invest in growth stocks which may be more volatile than the market in general and may react differently to economic, political and market developments and to specific information about the issuer. Growth stocks traditionally show higher volatility than other stocks, especially over short periods. These stocks may

SCHEME INFORMATION DOCUMENT

also be more expensive in relation to their profits than the market in general. Consequently, growth stocks may react with more volatility to variations in profit growth.

The Fund Manager may temporarily adopt a more defensive approach if it considers that the equity market or economy is experiencing excessive volatility, a persistent general decline, or other unfavourable conditions. In such circumstances, the Scheme may be unable to achieve or pursue its investment objective.

The Scheme may invest in companies making an initial public offering. In such cases there is a risk that the price of the newly floated share is more volatile due to factors such as the absence of previous trading, unseasonal transactions and the limited number of securities available for trading.

- **Risks associated with investing in fixed income securities:**

1. **Credit and Counterparty risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts.

The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default.

If the credit rating of an issue, issuer or counterparty is downgraded this may cause the value of the related debt securities in which the scheme has invested to fall.

The severity of the risk varies depending on the quality of the securities in the scheme. To the extent that the scheme invests in high-yield bonds, this presents a higher than average risk. There are different types of debentures available in the market. Some of them could be more risky. Lower-quality debt securities and certain types of securities involve greater risk of default or price changes due to changes in the credit quality of the issuer. They are not in the first rank of debts in case of default. The value of lower-quality debt securities and certain types of other securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market or economic developments.

2. **Liquidity Risk:** The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests.

A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic/corporate event.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme.

The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

3. **Interest Rate Risk & Re-investment Risk:** The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

The value of debt and fixed income securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa.

Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.

The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

4. **Sovereign risk:** The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities.

SCHEME INFORMATION DOCUMENT

Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

- **Concentration Risk:**

The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme

- **Risk associated with investments in derivatives:**

The scheme may use various derivative instruments and techniques, permitted within SEBI Regulation from time to time only for portfolio balancing and hedging purpose, which may increase the volatility of scheme's performance. Usage of derivatives will expose the scheme to certain risks inherent to such derivatives.

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is a possibility that a loss may be sustained by the Scheme as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance.

In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence the derivative cannot be expected to perfectly hedge the risk of the underlying assets. This also increases the volatility of the Scheme's performance.

Some of the risks inherent to derivatives investments include:

1. **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
2. **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
3. **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
4. **Limitations on upside:** Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
5. **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

- **Risks associated with investing in securitised debt:**

The scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitised debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit

SCHEME INFORMATION DOCUMENT

enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

Pass through Certificate (PTC) (Pay through or other Participation Certificates) represents beneficial interest in an underlying pool of cash flows. These cash flows represent dues against single or multiple loans originated by the sellers of these loans. These loans are given by banks or financial institutions to corporates. PTCs may be backed, but not exclusively, by receivables of personal loans, car loans, two wheeler loans and other assets subject to applicable regulations.

How the risk profile of securitized debt fits into the risk appetite of the scheme

Securitized debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income like characteristics. The risk of investing in securitized debt is similar to investing in debt securities. In addition, securitized debt may also carry prepayment risk and has a relatively higher liquidity risk (the same are explained in the sections that follow). However, if the fund manager evaluates that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation table. The investment shall be in securitized instruments that are top rated (AAA/ A1+) or its equivalent, by a recognised credit rating agency for the retail pool, and for single loan securitization, limits will be assigned as per the internal credit policy of the Fund.

Policy relating to originators

The originator is the person who has initially given the loan. The originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). An analysis of the originator is especially important in case of retail loans as this affects the credit quality and servicing of the PTC. Originators may be: Banks, Non Banking Finance Companies, Housing Finance Companies, etc. The fund manager's evaluation will be based on the track record of the originator, delinquencies in the pool and the seasoning of the pool. Other factors that will be considered are loan type, size of the loan, average original maturity of the pool, Loan to Value Ratio, geographical distribution, liquid facility, default rate distribution, credit enhancement facility and structure of the pool.

Risk associated with each kind of originator:

- (a) **Prepayment risk:** MBS and ABS are subject to prepayment risk. When the underlying loans are paid off by the borrower prior to their respective due dates, this is known as a prepayment. It could be triggered on account of various factors particularly in periods of declining interest rates. The possibility of such prepayment may require the scheme to reinvest the proceeds of such investments in securities offering lower yields, thereby reducing the scheme's interest income.
- (b) **Interest rate risk:** MBS carry interest rate risk. Home loan borrowers are provided the facility of refinancing their loans at the prevailing interest rates. A lowering of interest rates could induce a borrower to pay his loan off earlier than the scheduled tenure, whereas if the interest rates move upward, the borrower would tend to hold on to his loan for a longer period, thus increasing the maturity of the bond. The maturity of the bond could therefore shorten or lengthen, depending on the prevailing interest rates.
- (c) **Credit risk / default risk:** MBS and ABS also carry credit or default risk. MBS and structures carry built – in credit enhancement in different forms. However, any delinquencies would result in reduction of the principal amount if the amount available in the credit enhancement facility is not enough to cover the shortfall. Historically, housing loans have had lower default rates than other forms of credit.
- (d) **Price risk / liquidity risk:** MBS and ABS are subject to prepayment risk. Limited volumes of trading in securitized paper in secondary market could restrict or affect the ability of the scheme to re-sell them. Thus these trades may take place at a discount, depending on the prevailing interest rates.

In case of securitization involving single loans or a small pool of loans, the credit risk of the underlying borrower is analyzed. In case of diversified pools of loans, the overall characteristic of the loans is analyzed to assess the credit risk. Securitization transactions may include some risk mitigants (to reduce credit risk). These may include interest subvention (difference in interest rates on the underlying loans and the PTC serving as margin against defaults), overcollateralization (issue of PTCs of lesser value than the underlying loans, thus even if some loans default, the PTC continues to remain protected), presence of an equity / subordinate tranche (issue of PTCs of differing seniority when it comes to repayment - the senior tranches get paid before the junior tranche) and / or guarantees.

SCHEME INFORMATION DOCUMENT
Level of diversification with respect to the underlying assets and risk mitigation measures for less diversified investments:

Currently, the following parameters are used while evaluating investment decision relating to a pool securitization transaction. These parameters may be revised the from time to time.

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	Car	Two wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average maturity (in Months)	Up to 10 yrs	Up to 3 yrs	Upto 3 yrs	Up to 3 yrs	NA	NA	Refer to Note a	Refer to Note b

Average Loan to Value Ratio	<90%	<80%	<80%	<80%	NA	NA		
Average seasoning of the Pool	>3 mths	>3 mths	>3 mths	>3 mths	NA	NA		
Maximum single exposure range	<1%	<1%	<1%	<1%	NA	NA		
Average single exposure range %	<1%	<1%	<1%	<1%	NA	NA		

Notes

- In case of securitization involving single loans or a small pool of loans, the credit risk of the borrower is analyzed. The investment limits applicable to the underlying borrower are applied to the single loan sell-down.
- Other investments will be decided on a case-to-case basis.

Minimum retention period of the debt by originator prior to securitization

Issuance of securitized debt is governed by the Reserve Bank of India. RBI norms cover the "true sale" criteria including credit enhancement and liquidity enhancements. In addition, RBI has proposed minimum holding period of between nine and twelve months for assets before they can be securitized. The minimum holding period depends on the tenure of the securitization transaction. The Scheme will invest in securitized debt that is in compliance with the regulations.

Minimum retention percentage by originator of debts to be securitized

RBI norms cover the "true sale" criteria including credit enhancement and liquidity enhancements, including maximum exposure by the originator in the PTCs. In addition, RBI has proposed minimum retention requirement of between five and ten percent of the book value of the loans by the originator. The minimum retention requirement depends on the tenure and structure of the securitization transaction. The Scheme will invest in securitized debt that is in compliance with the regulations.

Mechanism to tackle conflict of interest when the mutual fund invests in securitised debt of an originator and the originator in turn invests makes investments in that particular scheme of the fund

The key risk in securitized debt relates to the underlying borrowers and not the originator. In a securitization transaction, the originator is the seller of the debt(s) and the scheme is the buyer. However, the originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). As the originators may also invest in the scheme, the fund manager shall ensure that the investment decision is based on parameters as set by the Investment Committee (IC) of the AMC and IC shall review the same at regular interval.

The resources and mechanism of individual risk assessment with the AMC for monitoring investments in securitised debt

The fund management team including the credit analyst has the experience to analyze securitized debt. In addition, credit research agencies provide analysis of individual instruments and pools. On an on-going basis (typically monthly) the servicer provides reports regarding the performance of the pool. These reports would form the base for ongoing evaluation where applicable. In addition, rating reports indicating rating changes would be monitored for changes in rating agency opinion of the credit risk.

- Risk factors specific to investments in foreign securities:**

To the extent that the assets of the scheme may invest in foreign securities, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market, lack of complete or reliable information, market irregularities or high taxation. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances. Market risks can be greater

SCHEME INFORMATION DOCUMENT

with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. As the investment will be in securities, which are denominated in foreign currencies, fluctuation in the exchange rates of the foreign currencies may have an impact on the income and value of the fund. It may be noted that if rupee appreciates, it will lead to reduction in returns to investor. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the scheme's investments

- **Risks associated with investing in liquid funds:**

To the extent of the investments in liquid mutual funds, the risks associated with investing in liquid funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

- **Risks related to arbitrage strategy**

In case of a large redemption, the scheme may need to reverse the spot-futures transaction before the date of futures' settlement. This eventuality may lead to the basis risk. While reversing the spot-futures transaction on the Futures & Options settlement day on the Exchange, there could be a risk of volume-weighted-average-price of the market being different from the price at which the actual reversal is processed. This may result in basis risk.

On the date of expiry, when the arbitrage is to be unwound, it is not necessary for the stock price and its future contract to coincide. There could be a discrepancy in their prices even a minute before the market closes. Thus, there is a possibility that the arbitrage strategy gets unwound at different prices.

- **Risks associated with investments in REITs AND InvITs:**

- **Price Risk / Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. The valuation of the REIT/InvIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT/InvIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. REITs & InvITs may have volatile cash flows. As an indirect shareholder of portfolio assets, unit holders rights are subordinated to the rights of creditors, debt holders and other parties specified under Indian law in the event of insolvency or liquidation of any of the portfolio assets.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. Further, there is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists
- **Risk of lower than expected distributions:** The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things:
 - success and economic viability of tenants and off-takers
 - economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
 - force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
 - debt service requirements and other liabilities of the portfolio assets
 - fluctuations in the working capital needs of the portfolio assets
 - ability of portfolio assets to borrow funds and access capital markets
 - changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
 - amount and timing of capital expenditures on portfolio assets
 - insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents.
- **Interest Rate Risk:** Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

SCHEME INFORMATION DOCUMENT

- **Credit Risk:** In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. REITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.
- **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc may differ from existing capital market asset classes under Indian Law.
The above are some of the common risks associated with investments in REITs & InvITs. There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.
- **Risks associated with segregated portfolio:**
 - 1) Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
 - 2) Security comprises of segregated portfolio may not realise any value.
 - 3) Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
 - 4) Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.
- **Other Risks:**
 - (a) **Risk associated with inflation:** Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
 - (b) **Legal risk:** The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.
 - (c) **Taxation risk:** The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such, no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this Scheme Information Document (SID) is as available under the prevailing taxation laws. This could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the scheme will endure indefinitely.
 - (d) **Valuation risk:** This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.
 - (e) **Operational Risk:** Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the Scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme.
 - (f) **Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism:** The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order

SCHEME INFORMATION DOCUMENT

processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME.

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the scheme. However, if such limit is breached during the NFO of the scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the scheme complies with these two conditions. In case the scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the Regulations would become applicable automatically without any reference from SEBI and accordingly the scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the scheme on the applicable Net Asset Value on the 15th day of the notice period. The Scheme shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. SPECIAL CONSIDERATIONS

1. From time to time, the sponsor, their affiliates, associates, subsidiaries, the Mutual Fund and the AMC may invest directly or indirectly in the Scheme. These entities may acquire a substantial portion of the Scheme's units and collectively constitute a major investor in the Scheme.

3. Investment decisions made by the AMC may not always be profitable.
4. The tax benefits described in this Scheme Information Document are as available under the prevailing taxation laws. Investors are advised to consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming units, before making a decision to invest / redeem units.
6. As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for Redemption of Units may be significant in the event of an inordinately large number of Redemption requests or of a restructuring of the Scheme(s). In view of the above, the Trustee has the right, in its sole discretion, to limit Redemptions (including suspending Redemptions) under certain circumstances, as described under the section pertaining to 'Restriction of Repurchase/Redemption under the Scheme'.
7. Neither this SID nor the Units have been registered in any jurisdiction. The distribution of this SID in certain jurisdictions may be restricted or totally prohibited to registration requirements and accordingly, persons who come into possession of this SID are required to inform themselves about and to observe any such restrictions.

In the event of the scheme not being rebalanced within the aforesaid period, justification for the same shall be placed before Investment Committee of the AMC and reasons for the same shall be recorded in writing. Investment Committee shall then decide on the course of action and may suggest rebalancing of the portfolio. However, at all times the AMC shall ensure that the portfolio would adhere to the overall investment objective of the scheme.

Change in investment pattern

Subject to the SEBI Regulations, the asset allocation pattern indicated above may change from time to time, depending on liquidity considerations or on account of high levels of repurchase or redemptions relative to scheme size, or upon considerations that optimise returns of the scheme through investment opportunities or upon various defensive considerations including market conditions, market opportunities, applicable regulations and political and economic factors. Asset Allocation proportions may vary substantially depending upon the perception of the AMC the intention being at all times to seek to protect the interests of the unit holders. Such changes in the investment pattern will be for short term and only for defensive considerations. In addition, as part of the investment process, the Investment Committee of the AMC will conduct a periodic review of the asset allocation and may suggest rebalancing of the portfolio.

For further details on asset allocation and investment pattern and investment strategy of each of the above schemes, please refer to the Scheme Information Document of the respective scheme.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The funds strategy seeks to generate income and capital appreciation by taking advantage of diversification by investing in a mix of asset classes comprising equity & equity related instruments and fixed income securities including money market instruments. It also aims to manage risk through active selection within the specified asset allocation range. The aim is to improve risk adjusted returns through diversification across these asset classes.

The equity portion of the portfolio will aim to provide long-term capital growth through a diversified and actively managed portfolio of equity and equity related securities. In case of using equity strategy the Scheme will follow a bottom-up approach for stock-picking and choose companies across sectors and the Scheme will primarily focus on companies that have demonstrated characteristics such as market leadership, strong financials and quality management, and have the potential to create wealth for their shareholders by delivering steady

SCHEME INFORMATION DOCUMENT

performance through the ups and downs of the market. The focus would be to build a diversified portfolio of both value and growth companies, all companies selected will be analysed taking into account the business fundamentals, the company's financial strength, industry structure, management quality, future earnings expectations and sensitivity of earnings.

The debt portion of the portfolio will be actively managed based on the AMC's view on interest rates. The price of fixed income instruments varies with changes in interest rates. As interest rates decline, the value of fixed income securities rise and as interest rates rise, their value declines. The AMC forms views on the likely direction of interest rates and the portfolio is structured consistent with these views. Individual instruments are bought and sold based on the conformity with the interest rate view and the instrument specific factors (credit risk, exposure). By actively managing the portfolio, the Scheme attempts to achieve its objective through both interest yield and capital appreciation. As such, the Scheme may not invest solely based on the best available yields in the market at all points of time.

Risk control measures

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. While allocating and choosing securities, the Investment Manager will aim to diversify by gaining broad exposure to different industries and companies in order to reduce risk.

For investments in fixed income instruments, a credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the Tri-party repo on Government Securities or treasury bills / repo market, units of mutual fund which seeks to ensure liquidity in the scheme under normal circumstances. There can however be no guarantee against liquidity risk within the Scheme.

The AMC may also implement certain internal control procedures / risk & exposure limits etc. for controlling risks which may be varied from time to time. The Scheme may utilise derivative instruments for hedging & portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre-approved International Swaps and Derivatives Association (ISDA) agreements. The scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI/RBI for the purpose of hedging and portfolio rebalancing.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in Scheme.

Portfolio turnover

Portfolio turnover is defined as lesser of purchases and sales as a percentage of the average corpus of the Scheme during a specified period of time. Portfolio turnover would depend upon the market conditions such as volatility of the market and inflows/outflows in the scheme. The Scheme is an open ended Scheme with subscriptions and redemptions expected on a daily basis. Hence, it will be difficult to estimate the portfolio turnover with any reasonable amount of accuracy.

Position of debt & money market in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds. The G-Sec market is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Sec market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

SCHEME INFORMATION DOCUMENT

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri-party repo on Government Securities or treasury bills (TREPS)
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as money market instruments, PSU / DFI / corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option. The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

10 Y AAA Institutional Bond	6.90-7.00

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

Strategies involving Derivatives

The scheme intends to use derivatives for the purposes, which may be permitted by the Regulations from time to time. Presently derivatives can be used only for hedging & portfolio balancing. SEBI has vide its Circular SEBI/MFD/CIR No.03/158/03 dated June 10, 2003, specified the guidelines pertaining to trading by Mutual Fund in Exchange Traded Derivatives. Accordingly, the scheme may use derivative instruments viz. Interest Rate Swaps, Forward Rate Agreements, Options or such other derivative instruments as may be introduced from time to time as permitted under the SEBI Regulations and guidelines for hedging and portfolio rebalancing.

The following information provides a basic idea as to the nature of the derivative instruments proposed to be used by the scheme and the benefits and risks attached therewith.

Interest Rate Swaps (IRS) and Forward Rate Agreements (FRA)

SCHEME INFORMATION DOCUMENT

Why invest in IRS & FRA

Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rate by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

IRS

All swaps are financial contracts, which involve exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through an intermediary (market maker). An IRS can be defined as a contract between two parties (counter parties) to exchange, on particular dates in the future, one series of cash flows, (fixed interest) for another series of cashflows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cashflows need not occur on the same date.

FRA

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRA is that the only payment is the difference between the FRA rate and the reference rate and hence is single settlement contracts. As in the case of IRS, notional amounts are not exchanged. However, there is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party to comply with the terms of the contract. To the extent that settlements of contracts are not guaranteed by an exchange or clearing corporation, hence, there is the risk of counterparty to a deal defaulting in payment.

Illustrations

Basic Structure of a Swap

Assume that the scheme has a Rs. 20 crore floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the scheme is currently running an interest rate risk and stands to lose if the interest rate moves down. To hedge this interest rate risk, the scheme can enter into a 6 month MIBOR swap. Through this swap, the Scheme will receive a fixed predetermined rate (assume 12%) and pays the "benchmark rate" (MIBOR), which is fixed by the National Stock Exchange of India Limited (NSE) or any other agency such as Reuters. This swap would effectively lock-in the rate of 12% for the next 6 months, eliminating the daily interest rate risk. This usually is routed through an intermediary who runs a book and matches deals between various counterparties.

The steps will be as follows -

- Assuming the swap is for Rs. 20 crore June 1, 2020 to December 1, 2020. The Scheme is a fixed rate receiver at 12% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).
- On June 1, 2020, the Scheme and the counterparty will exchange only a contract of having entered this swap. This documentation would be as per International Swap Dealers Association (ISDA).
- On a daily basis, the benchmark rate fixed by NSE will be tracked by them.
- On December 1, 2020, they will calculate the following -
 - The Scheme is entitled to receive interest on Rs. 20 crore at 12% for 184 days i.e. Rs.1.21 crore, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
 - The counterparty is entitled to receive daily compounded call rate for 184 days and pay 12% fixed.
 - On December 1, 2020, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 1.21 crore, the Scheme will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Scheme the difference.
 - Effectively the Scheme earns interest at the rate of 12% p.a. for six months without lending money for 6 months fixed, while the counterparty pays interest @ 12% p.a. for 6 months on Rs. 20 crore, without borrowing for 6 months fixed.

The above example illustrates the benefits and risks of using derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Arbitrage strategies

SCHEME INFORMATION DOCUMENT

The arbitrage strategies the fund may adopt could be as under. The list is not exhaustive and the fund could use similar strategies and any other strategies as available in the markets that are permitted by regulator.

Index / Stock spot - Index / Stock Futures: The pricing of the futures is derived from underlying Nifty spot or the underlying stock. It is the cost of carry that binds the value of the futures to the underlying portfolio. When the two go out of sync, there are opportunities. The cost of carry binds the futures price to the price of the underlying asset. The price of the futures at any given instance should typically be more than the level of Nifty at that point. Theoretically, the fair value of the futures is equal to the price of the underlying plus the cost of carry i.e. the interest rate prevailing for an equivalent credit risk, in this case is the Clearing Corporation of the Exchange. Cash and carry trades at times provide higher than the prevailing interest rates. There is an opportunity to exploit by selling the overpriced futures and buying the underlying portfolio. It may also happen that the Index / Stock Future may be at a discount. In such cases, the Scheme may buy the future and sell the stock after borrowing the same. The Scheme shall enter into a combination of the transactions simultaneously. If the Scheme has to unwind the positions prior to the expiry on account of redemptions or any other reason, the returns would depend on the spread between the spot and futures price at which the position is unwound. If the price differential between the spot and futures position of the subsequent month maturity is attractive near the expiry date, then the scheme may rollover the futures position and continue with the position in the spot market.

Rollover means unwinding the short position in the futures of the near month and simultaneously shorting the futures of the subsequent month. The Scheme shall endeavor to deploy its assets through transactions in the above pattern, which may involve Index Futures with Stock Futures or Futures of the same stock with different expiry months.

Cash Future Arbitrage: This strategy is employed when the price of the future is trading at a premium to the price of its underlying in spot market. The Scheme shall buy the stock in spot market and endeavor to simultaneously sell the future at a premium on a quantity neutral basis.

Buying the stock in spot market and selling the futures results into a hedge where the Scheme has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour's weighted average trade of the spot market. Thus there is a convergence between the spot price and the futures market on expiry. This convergence helps the Scheme to generate the arbitrage return locked in earlier.

On or before the date of expiry, if the price differential between the spot and futures position of the subsequent month maturity still remains attractive, the scheme may rollover the futures position and hold onto the position in the spot market. In case such an opportunity is not available, the scheme would liquidate the spot position and settle the futures position simultaneously. Rolling over of the futures transaction means unwinding the short position in the futures of the current month and simultaneously shorting futures of the subsequent month maturity, and holding onto the spot position.

Corporate Action / Event Driven Strategies:

- (i) Dividend Arbitrage: At the time of declaration of dividend, the stock futures / options market can provide a profitable opportunity. Generally, the stock prices decline by the dividend amount when the stock becomes ex-dividend.
- (ii) Buy-Back/ Open offers Arbitrage: Companies that are targets for buy-backs/ open offers, provide opportunities depending on the difference between the traded price and the buy-back open offer price. The scheme will take a long position in a stock for which the buy-back/ open offer price is expected to be higher than the traded price. Depending on the probability of the open offer and acceptance of shares, the scheme may take a certain short position in the future of the same stock.
- (iii) Merger Arbitrage: When the Company announces any merger, amalgamation, hive off, de-merger, etc, there could be opportunities due to price differential in the cash and the derivative market.
- (iv) Delisting Arbitrage: When a company intends to delist from the stock exchanges, it goes for a Reverse Book Building process and offers an exit price to all existing shareholders. The scheme can take a long position in a stock in case the traded price is below the expected exit price.

SCHEME INFORMATION DOCUMENT

The Scheme may also use various derivative and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders' interest.

SEBI vide its circular no. MFD/CIR/011/061/2000 dated February 1, 2000 and such other circulars issued from time to time have permitted all mutual funds to participate in derivatives trading subject to observance of guidelines issued by SEBI in this behalf. Pursuant to this, mutual funds may use various derivative and hedging products from time to time, as would be available and permitted by SEBI.

Accordingly, the Scheme may use derivative instruments like futures & options stock indices, future & options on individual securities or such other derivative instruments as may be introduced from time to time as permitted under the SEBI Regulations.

The following information provides a basic idea as to the nature of the derivative instruments proposed to be used by the Fund and the benefits and risks attached therewith. **Please note that the examples have been given for illustration purposes only.**

Index Futures Benefits

Investment in stock index futures can give exposure to the index without directly buying the individual stocks. Appreciation in index stocks can be effectively captured through investment in Stock Index Futures. The Fund can sell futures to hedge against market movements effectively without actually selling the stocks it holds. The stock index futures are instruments designed to give exposure to the equity market indices. The Bombay Stock Exchange and the National Stock Exchange trade in index futures of 1, 2 and 3-month maturities. The pricing of an index future is the function of the underlying index and interest rates.

Illustration

Spot Index: 1790

1 month Nifty Future Price on day 1: 1800. Fund buys 100 lots. Each lot has a nominal value equivalent to 200 Units of the underlying index.

Situation 1:

Let us say that on the date of settlement, the future price = closing spot price = 1810

Profits for the Fund = $(1810 - 1800) * 100 \text{ lots} * 200 = \text{Rs } 200,000$

Situation 2:

Let us say that on the date of settlement, the future price = Closing spot price = 1795

Loss for the Fund = $(1795 - 1800) * 100 \text{ lots} * 200 = (\text{Rs } 100,000)$

The net impact for the Fund will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity). Thus, it is clear from the example that the profit or loss for the Fund will be the difference of the closing price (which can be higher or lower than the purchase price) and the purchase price.

Buying Options

Benefits of buying a call option

Buying a call option on a stock or index gives the owner the right, but not the obligation, to buy the underlying stock / index at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

Illustration

If the Fund buys a 1 month call option on Reliance at a strike price of Rs. 500, the current market price being say Rs.505. The Fund will have to pay a premium of say Rs. 25 to buy this call. If the stock price goes below Rs. 500 during the tenure of the call, the Fund avoids the loss it would have incurred had it straightaway bought the stock instead of the call option. The Fund gives up the premium of Rs. 25 that has to be paid in order to protect the Fund from this probable downside. If the stock goes above Rs. 500, it can exercise its right and own Reliance at a cost price of Rs. 500, thereby participating in the upside of the stock.

Benefits of buying a put option: Buying a put option on a stock originally held by the buyer gives him / her right, but not the obligation, to sell the underlying stock at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

SCHEME INFORMATION DOCUMENT

Illustration

If the Fund owns Reliance and also buys a three-month put option on Reliance at a strike of Rs. 500, the current market price being say Rs.505. The Fund will have to pay a premium of say Rs. 35 to buy this put. If the stock price goes below Rs. 500 during the tenure of the put, the Fund can still exercise the put and sell the stock at Rs. 500, avoiding therefore any downside on the stock below Rs. 500. The Fund gives up the fixed premium of Rs. 35 that has to be paid in order to protect the Fund from this probable downside. If the stock goes above Rs. 500, say to Rs. 515, it will not exercise its option. The Fund will participate in the upside of the stock, since it can now sell the stock at the prevailing market price of Rs. 515.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the Scheme will be benchmarked to the performance of **CRISIL Hybrid 35+65-Aggressive Index**. CRISIL Hybrid 35+65-Aggressive Fund Index (erstwhile CRISIL Balanced Fund-Aggressive Index) has been developed by CRISIL, an independent reputed credit rating agency. The Index History is calculated from the base date of 31st March, 2002. The Index consists of tracking the returns on the constituents in both the Equity and the Non-Equity sector of the market. The Index is designed to track the performance of an equity-oriented hybrid portfolio having a blend of the Total return variant of S&P BSE 200 (65%) and CRISIL Composite Bond Fund Index (35%).

Hence in our opinion, this benchmark index is appropriate for analysing and capturing market movements and for determining the corresponding effect on a portfolio investing in the above-mentioned instruments.

The Trustees reserve the right to change the benchmark if due to a change in market conditions, a different index appears to be providing a more appropriate basis for comparison of fund performance or if the indicated benchmark ceases to exist or undergoes a substantial change.

An Illustration of impact of expense ratio on Scheme's returns:

If an investor A invests in a regular plan of a Scheme with an expense of 2% p.a. and an investor B invests in Direct Plan of the same scheme with an expense of 1% p.a. Assuming the gross return of this fund is 10% for that given year, investor A will make a return of 8% (post expense) for that year, whereas investor B will make 9% return for same period.

Also, please take a look at below illustration which shows impact of different expense ratio assumed on initial investment of Rs. 10,000 invested over period of 10 years with an average annualized gain of 10% p.a.
